Madhushala Pro

POS / Counter Operator Guide

A day at the counter, start to finish. Sign in, bill a sale on the POS, take UPI / QR payments, handle home delivery, transfers and breakage, look up a bill in the Sales Register, and keep every sale line queued for the state excise portal. Written for the operator standing at the counter, with a screenshot for every step.

Version 2.0 • 8 November 2026

Prepared for: counter operators and cashiers

How to use this guide

Every flow is written the same way: a small table of **who** can do it, **where** it lives in the menu, and **what** it is for, followed by numbered steps and any notes.

Roles in this guide
Your job - serve customers quickly: bill sales, take payment, and record the counter's daily transactions.
You sign in with your own **User Code** and **PIN**; your menu shows only the screens you are allowed to use.
Billing and printing never wait for the network - excise lines queue locally and upload later.

Conventions
Menu paths use a dash, for example **Tools - Change Password**.
Values you type or pick are shown in monospace, for example `CNT1`.
Money is shown in rupees.

Screenshots and the demo dataset

Every flow below is shown with a real screenshot of the rebuilt application, captured from a running copy with the demo dataset loaded. Each flow also carries a small **legacy mapping** table that names the original WinForms form and SQL Server table it came from, so anyone who knows the old Madhushala Pro product can find their way immediately.

Load the demo dataset before you explore (it resets the database):

```
node scripts/seed_demo.js
```

What the demo dataset contains
Company 1, year 2024 (2024-2025).
Users: `A00001` / `admin` (Admin), `A00002` / `cashier` (User), `A00003` / `store` (User).
Six items (Royal Stag, Blenders Pride, Kingfisher Beer, Absolut Vodka, Magic Moments, Budweiser), three stores (`MAIN`, `CNT1`, `BAR1`).
3 purchases, 7 sales bills (net Rs `39,300`), a stock transfer, breakage, payment / receipt / contra / journal vouchers, notes, fine, BRS, UPI and a delivery order.
Remote Tally Sync configured with 10 queued vouchers (9 delivered, 1 failed); state excise sync configured for West Bengal with 11 captured bills and a closing balance.
GST rates on every item (CGST / SGST split), a company GSTIN, and a GSTR-1 return for `2024-04` generated from the demo bills.

Part A - Getting started

Signing in

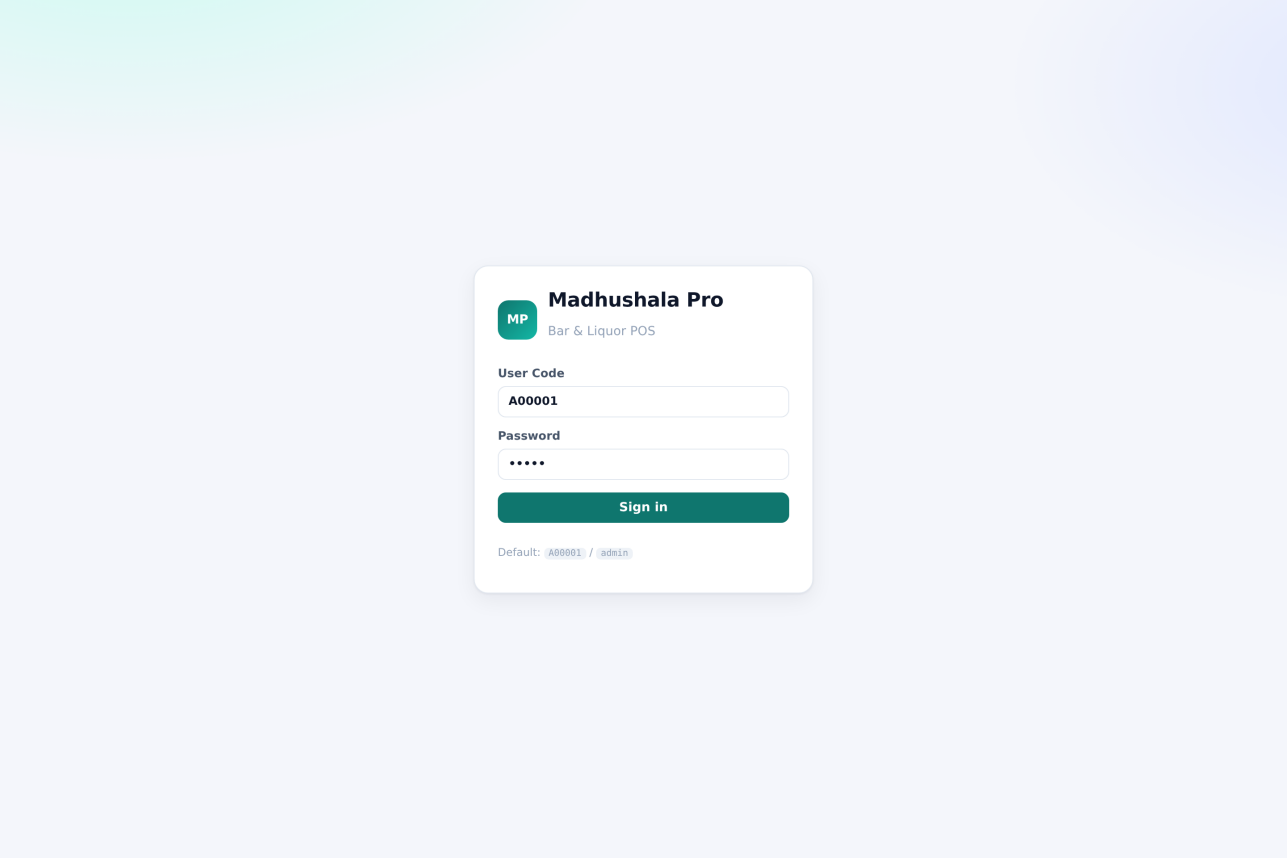

Who	Admin and User
Where	Start-up screen
What for	Open a session. Everything except the sign-in screen is locked until a user signs in.

1. Start the application (or open the app URL). The sign-in screen appears.
2. Type your **User Code** (for example `A00001`) and your **Password** (PIN).
3. Select **Sign in**.
4. On success the shell opens: the sidebar menu on the left, the page area on the right, and the current company and year shown in the top bar.

> **Notes**
> The shipped administrator is `A00001` with password `admin`. A second demo account, `A00002` (Cashier), is a non-admin user.
> A wrong user code or password shows an inline error and keeps you on the sign-in screen.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_login / frm_sign_in (users table)	Login screen -> POST /api/login; users table

The sign-in screen. Enter your User Code and PIN, then Sign in.

Signing out

Who	Admin and User
Where	Sidebar footer - Log out
What for	End the session and return to the sign-in screen.

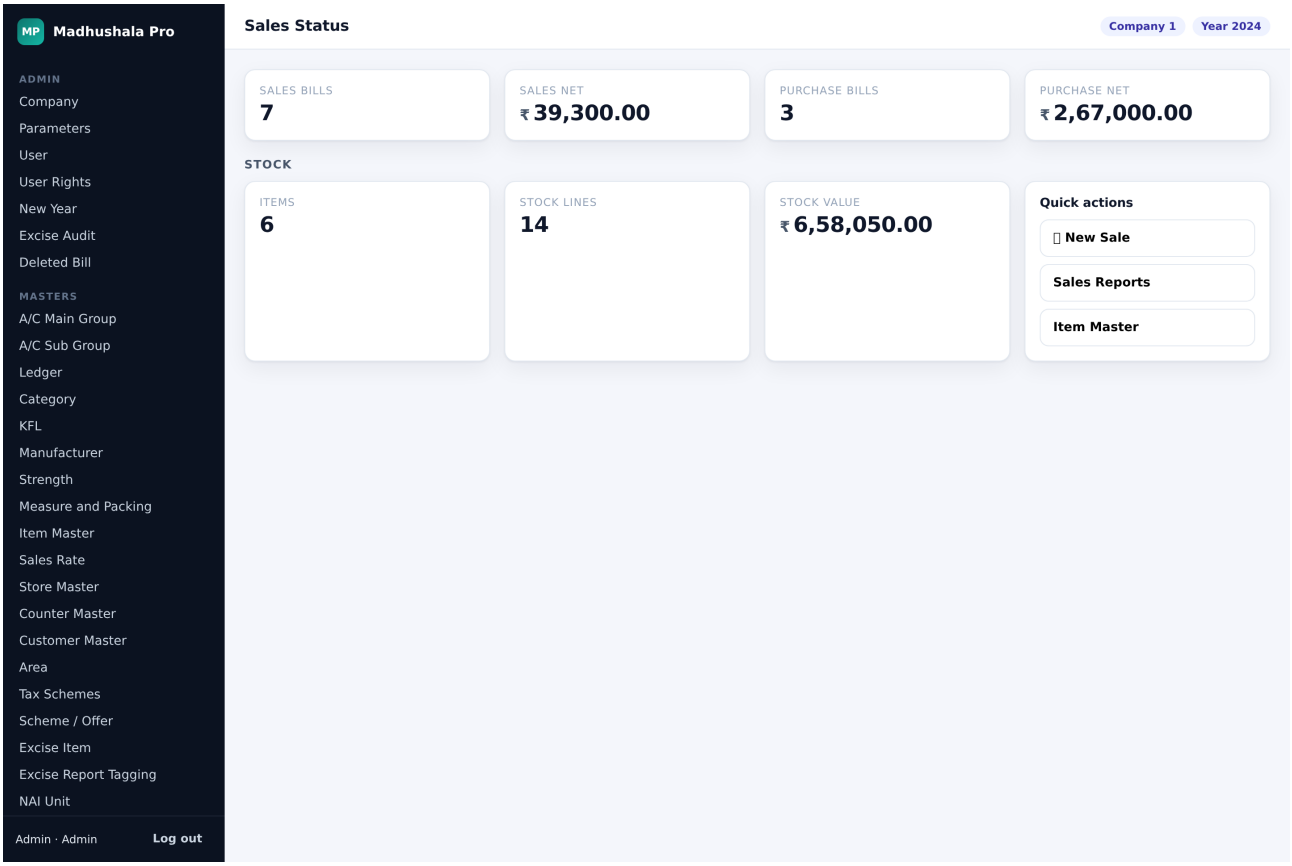

1 Select **Log out** at the bottom of the sidebar.

2 The session is cleared and the sign-in screen returns.

> **Notes**
> Always sign out on a shared counter so the next operator signs in with their own code.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_main session close	Sidebar footer - Log out

The dashboard shell; Log out sits at the bottom of the sidebar.

Changing your own PIN

Who	Admin and User
Where	Tools - Change Password
What for	Set a new password (PIN) for the account that is currently signed in.

1 Open **Tools - Change Password**.

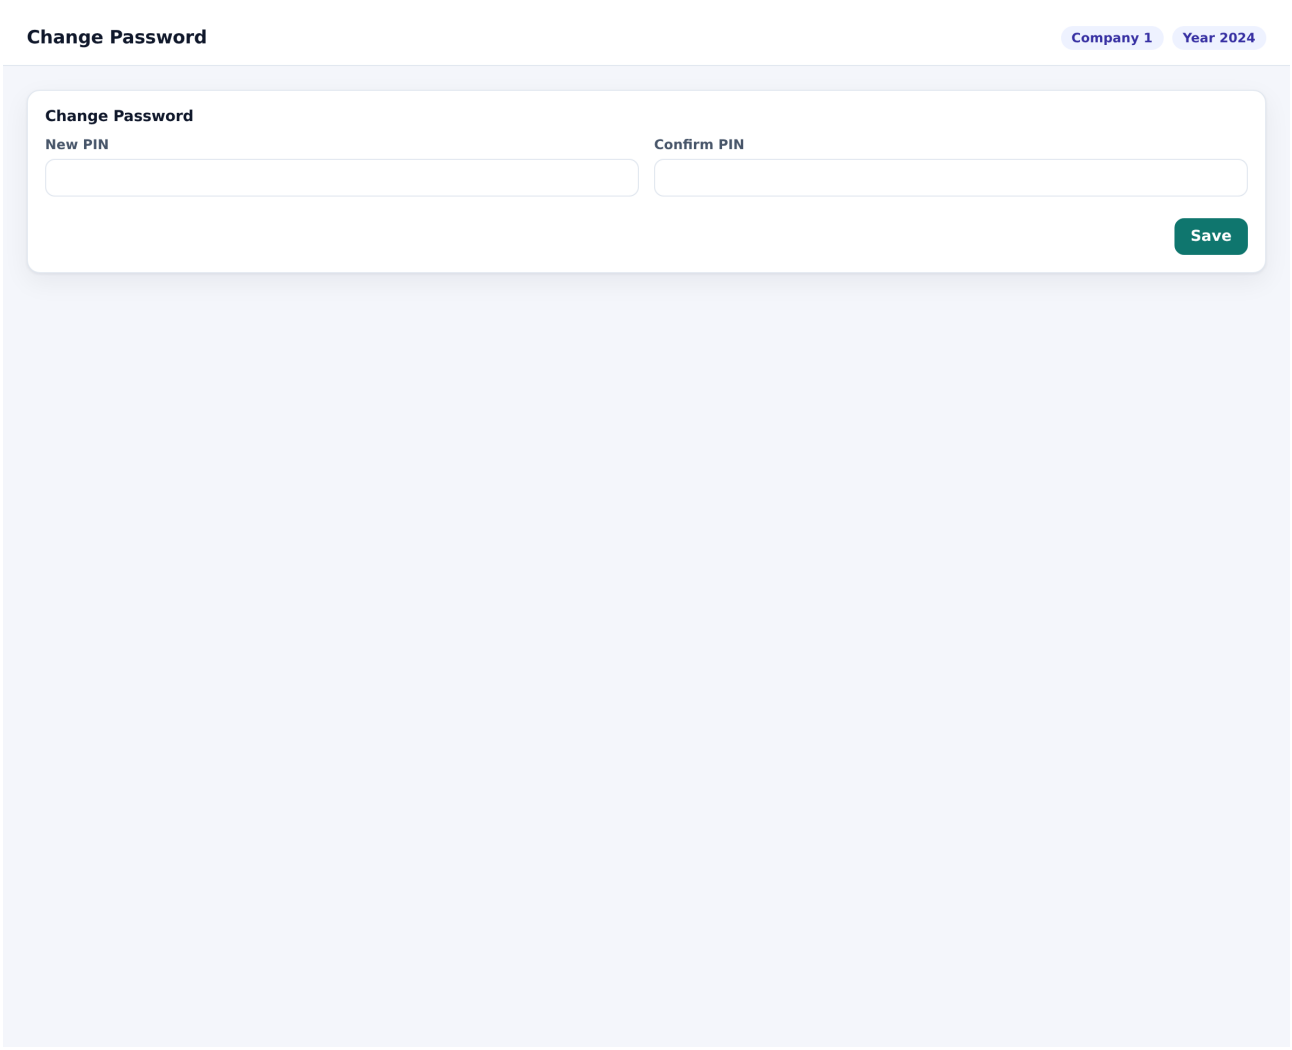

2 Type the **New PIN**, then repeat it in **Confirm PIN**.

3 Select the save button. A confirmation toast appears.

> **Notes**
> The two PIN fields must match, otherwise the change is refused.
> If you have lost the administrator PIN entirely, see 'Forgot the admin PIN' in Part F.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_userinfo self-edit	Tools - Change Password

Tools - Change Password.

Understanding roles: Admin vs User

Who	Reference
Where	Admin - User (Access Level)
What for	Understand what each access level can do and how the menu changes.

1 Every account has an **Access Level**: **Admin** or **User**.

2 **Admin** sees the full menu, including the whole **Admin** group (Company, Parameters, User, User Rights, New Year, Excise Audit, Deleted Bill).

3 **User** is intended for counter and back-office staff. The module rights below decide what they may do.

4 Module rights are set per user in **Admin - User Rights**: for each module (MASTERS, TRANSACTIONS, REPORTS, ADMIN, TOOLS) there are View, Add and Delete flags.

Notes
Important: in the current build the sidebar shows the same menu to both levels and the server does not yet block an API call by rights. The rights you record are the intended policy and are stored, but enforcement is on the roadmap. Treat Admin-level screens as administrator-only by convention.

Part B - Daily operations

Dashboard (Sales / Stock status)

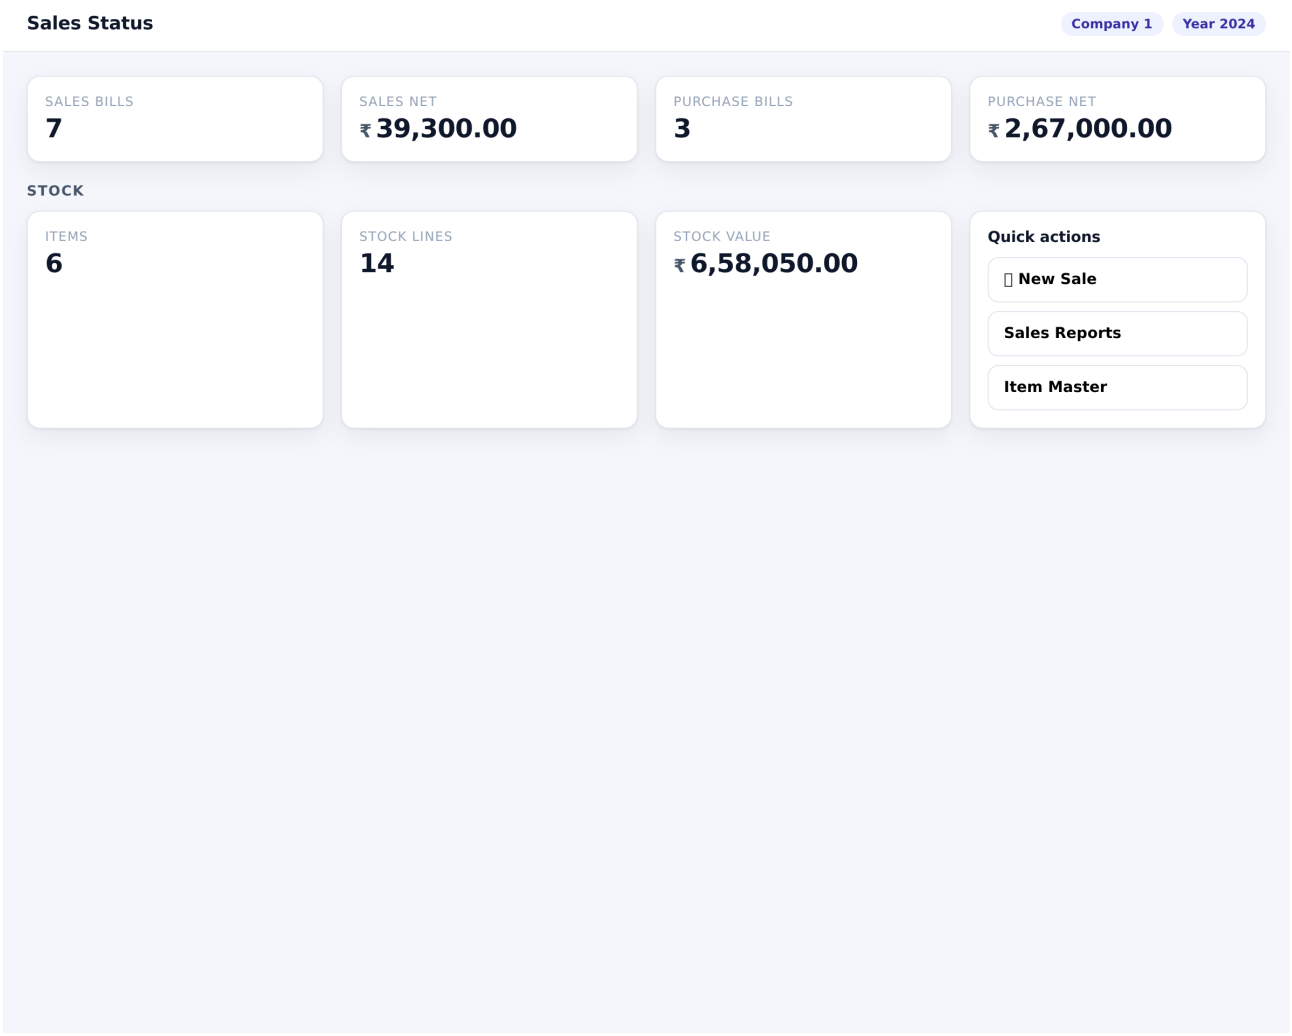

Who	Admin and User
Where	Dash Board - Sales Status (default page)
What for	See today's headline numbers at a glance: sales, purchases, stock and quick actions.

1. Sign in. The Dashboard opens by default.
2. Read the top cards: **Sales Bills**, **Sales Net**, **Purchase Bills**, **Purchase Net**.
3. Under **Stock** read **Items**, **Stock Lines** and **Stock Value**.
4. Use the **Quick actions** card: **New Sale**, **Sales Reports** or **Item Master**.
5. For other views open **Dash Board - Stock Status**, **Purchase Status** or **Scheme / Spirit-Beer / CS**.

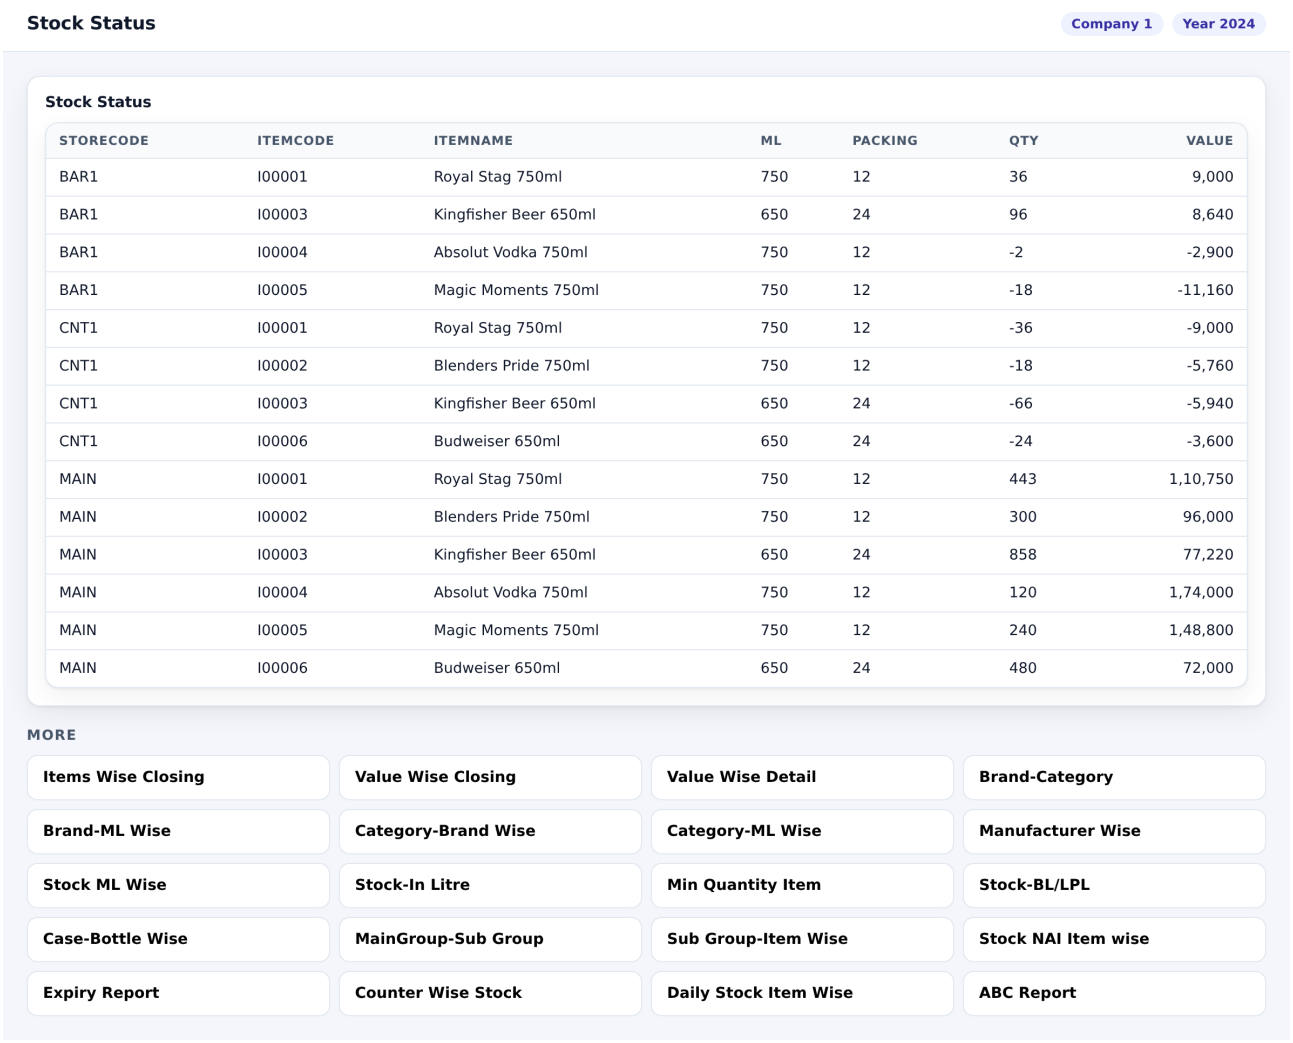

> **Notes**
> Status screens show a report table plus buttons for the related detailed reports.

Where this lives: legacy form / table → rebuilt screen

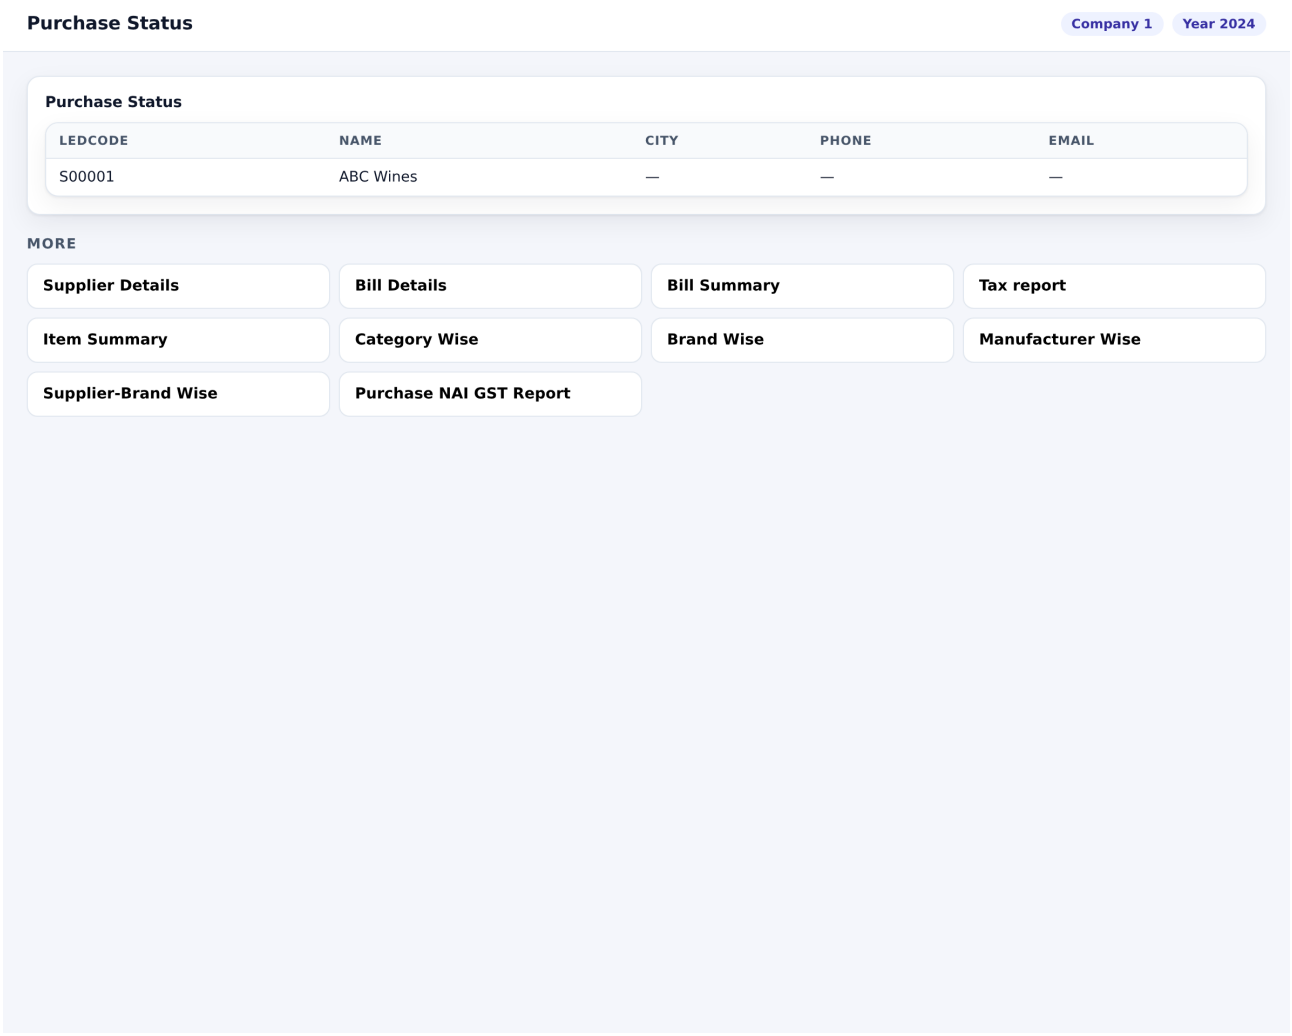

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_main status panels	Dashboard route; GET /api/dashboard

Dashboard: today's sales, purchases, stock value and top items.

Dashboard - Stock status.

Dashboard - Purchase status.

Sales

Billing a sale at the counter (Sale - POS)

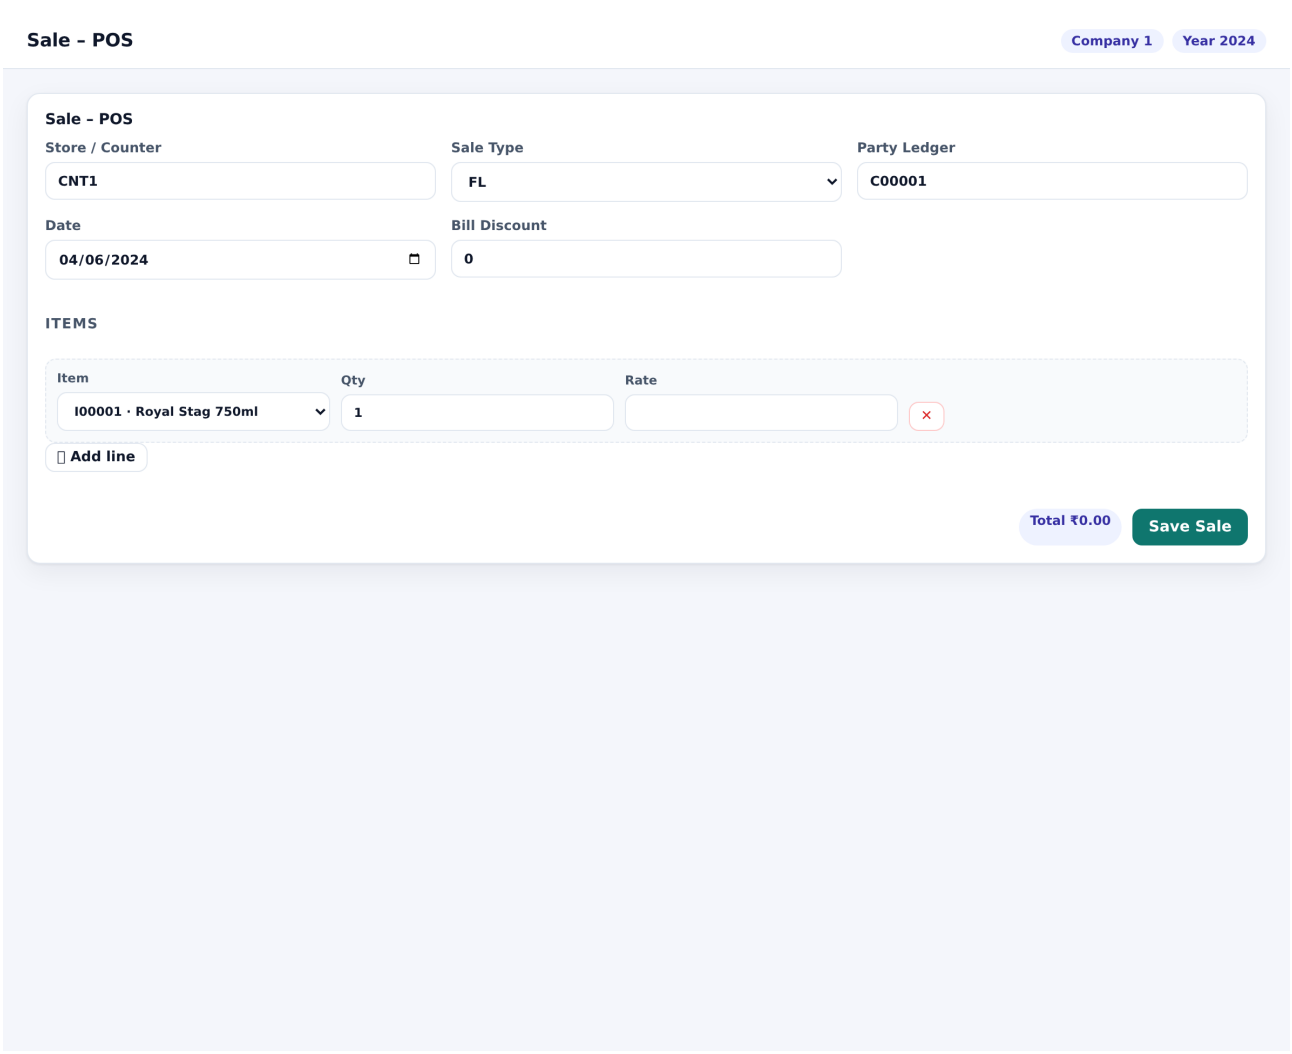

Who	Admin and User
Where	Transactions - Sale - POS
What for	The primary revenue flow: raise a bill, take payment, and update stock and accounts.

1. Open **Transactions - Sale - POS**.
2. Set **Store / Counter** (for example `CNT1`).
3. Choose the **Sale Type**: FL (foreign liquor), CS (country spirit), NAI (non-alcoholic), CASH, CREDIT or RETURN.
4. Set the **Party Ledger** (for a walk-in, the default `C00001` Walk-in Customer).
5. Set the **Date** and, if any, the **Bill Discount**.
6. Add one line per item: pick the **Item**, enter **Qty** and the **Rate**. Use **+ Add line** for more items.
7. Watch the running **Total** pill update as you type.
8. Select **Save Sale**. A dialog shows the new **Bill No**, **Gross**, **Discount** and **Net**.

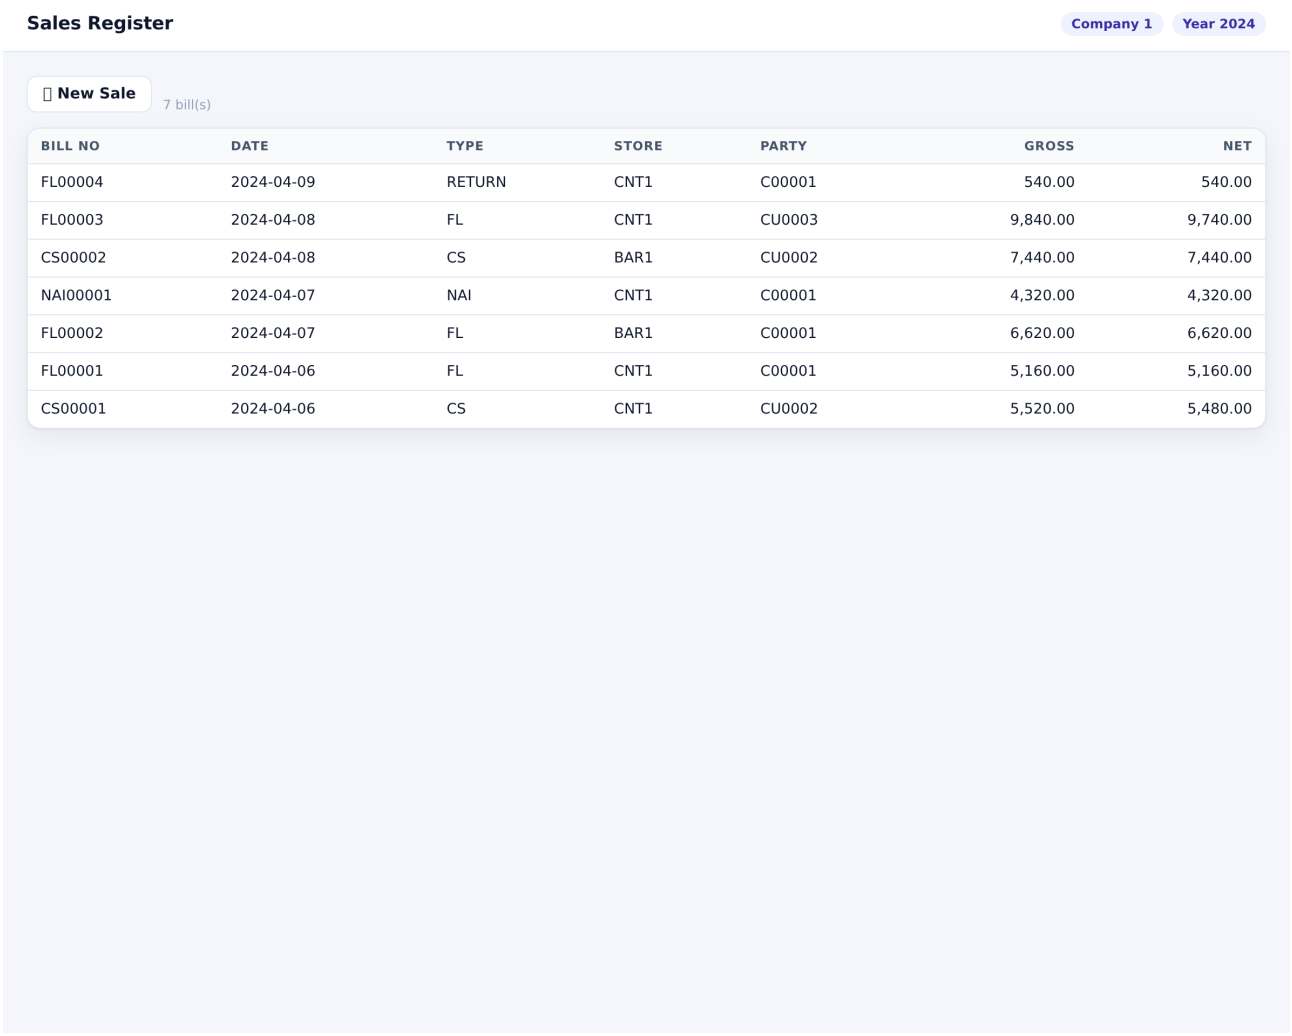

Notes
Bill numbers keep the legacy format: a type prefix (FL / CS / NAI) plus a running number, for example FL00001.
Saving writes the bill header and lines, posts the accounting entries (sale plus receipt against the cash or bank ledger) and updates stock.
The bill is also queued for Remote Tally Sync when that feature is switched on (see Part F).

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_countersales	Sale - POS
salesbillmain + salesbilldetail	sales.createSale() -> salesbillmain / salesbilldetail

Sale - POS. Pick items on the left; the bill totals update on the right.

Sales Register lists every bill you just posted.

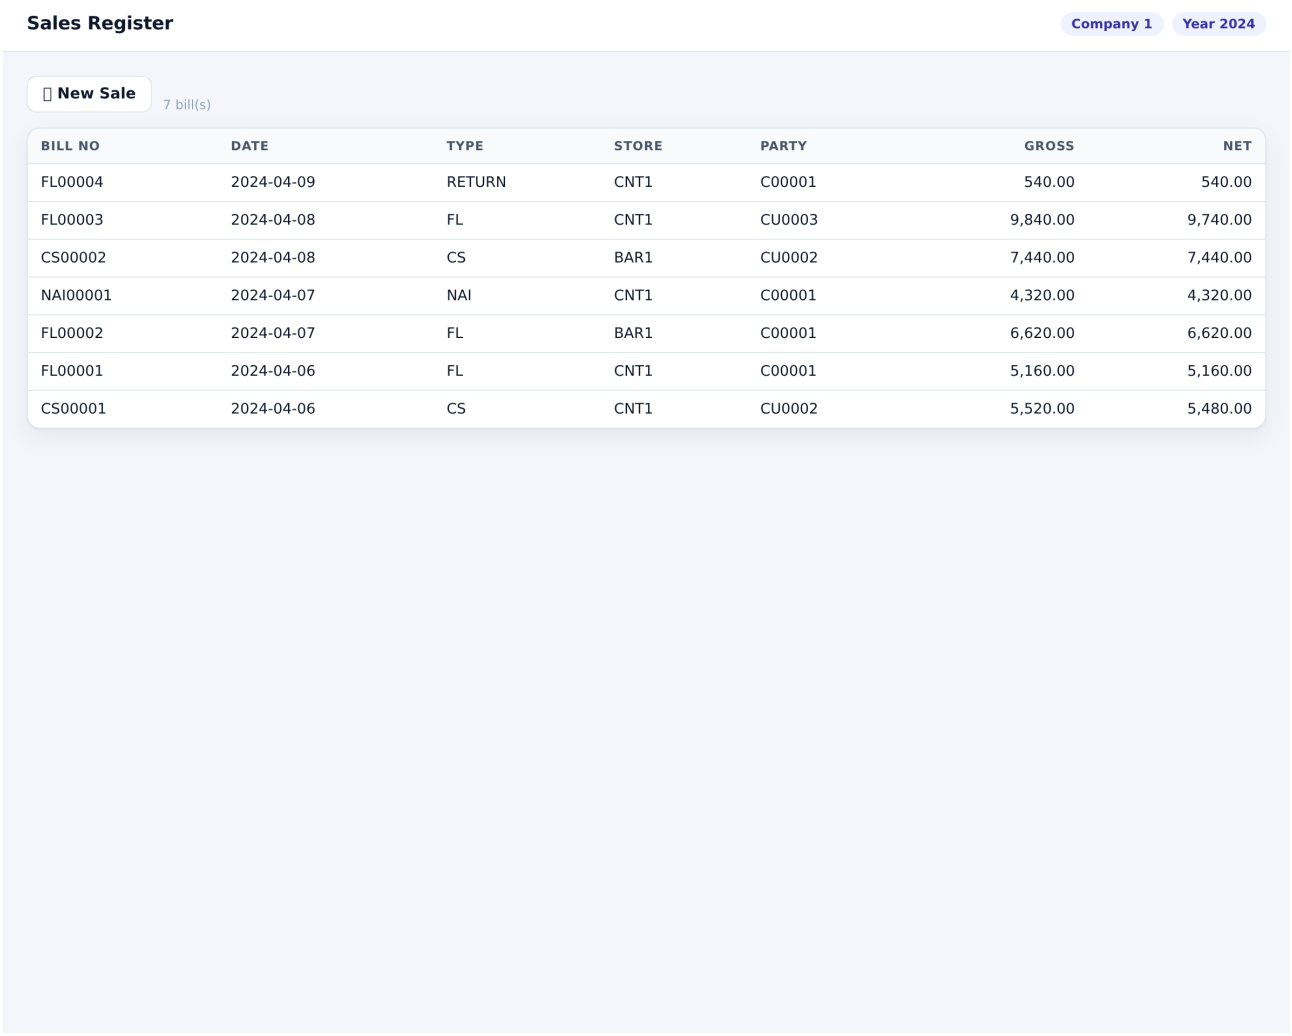

Viewing the Sales Register

Who	Admin and User
Where	Transactions - Sales Register
What for	List saved bills with type, party, gross and net amounts.

1. Open **Transactions - Sales Register**.
2. Read the table: Bill No, Date, Type, Store, Party, Gross, Net.
3. Use **+ New Sale** to jump straight to billing.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_bedit / sales grid	Sales Register (GET /api/sales)

BILL NO	DATE	TYPE	STORE	PARTY	GROSS	NET
FL00004	2024-04-09	RETURN	CNT1	C00001	540.00	540.00
FL00003	2024-04-08	FL	CNT1	CU0003	9,840.00	9,740.00
CS00002	2024-04-08	CS	BAR1	CU0002	7,440.00	7,440.00
NAI00001	2024-04-07	NAI	CNT1	C00001	4,320.00	4,320.00
FL00002	2024-04-07	FL	BAR1	C00001	6,620.00	6,620.00
FL00001	2024-04-06	FL	CNT1	C00001	5,160.00	5,160.00
CS00001	2024-04-06	CS	CNT1	CU0002	5,520.00	5,480.00

Sales Register.

Day close (refresh the sale summary)

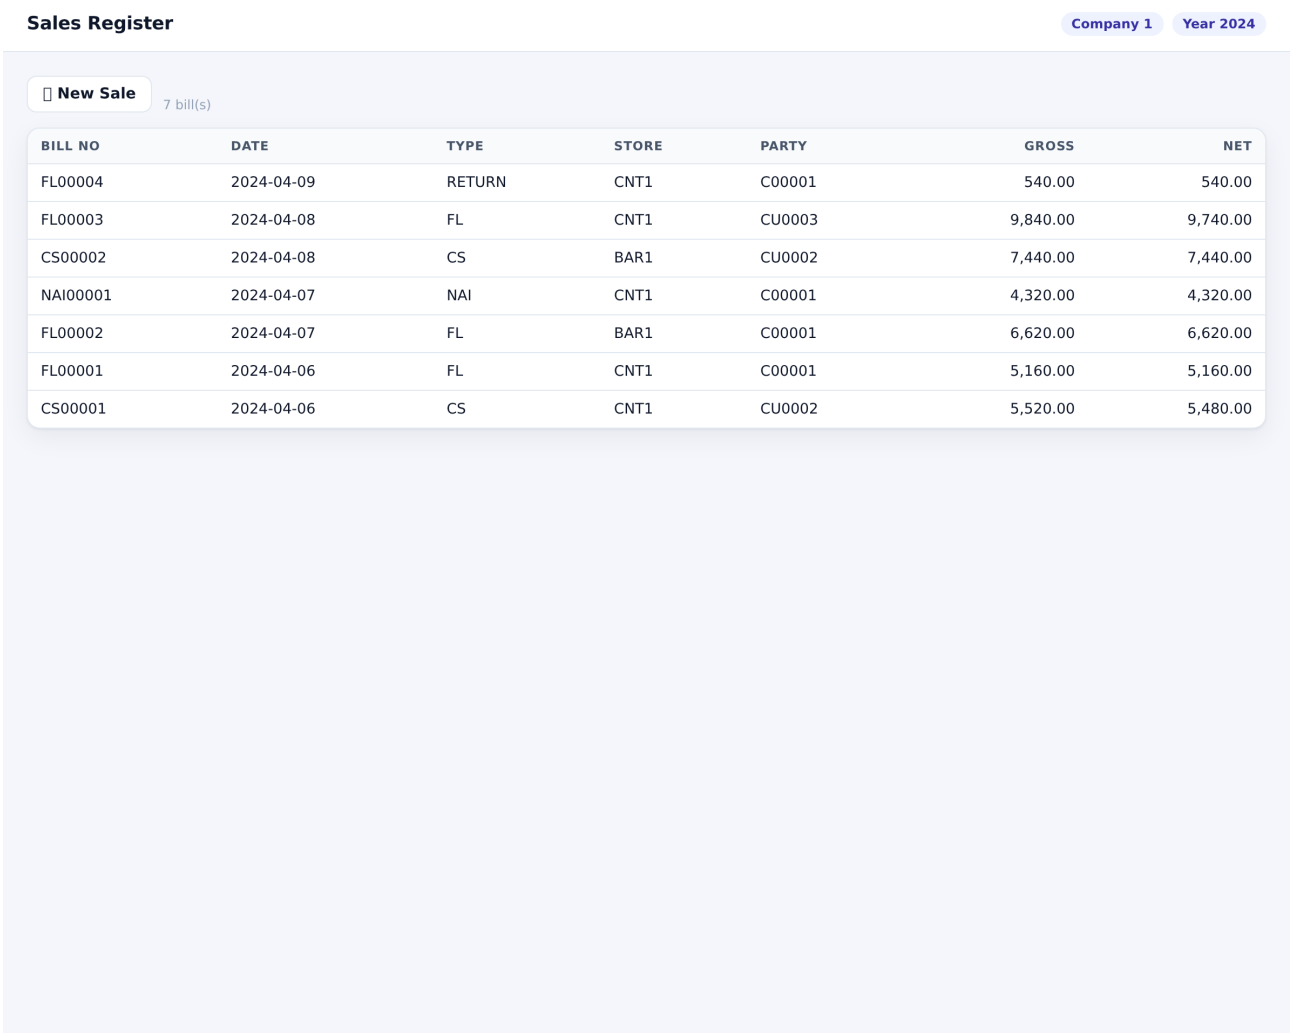

Who	Admin
Where	Daily routine (backend day-close)
What for	Close the day's sales so totals and stock snapshots are finalised.

1. Confirm all bills for the day are entered and printed.
2. Run the day-close action for the company and year.
3. The system stamps the unclosed bills with the close date and recomputes stock.

> **Notes**
> Day close is a routine that marks each bill as closed; run it once per business day.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_manualdayclose	POST /api/day-close

BILL NO	DATE	TYPE	STORE	PARTY	GROSS	NET
FL00004	2024-04-09	RETURN	CNT1	C00001	540.00	540.00
FL00003	2024-04-08	FL	CNT1	CU0003	9,840.00	9,740.00
CS00002	2024-04-08	CS	BAR1	CU0002	7,440.00	7,440.00
NAI00001	2024-04-07	NAI	CNT1	C00001	4,320.00	4,320.00
FL00002	2024-04-07	FL	BAR1	C00001	6,620.00	6,620.00
FL00001	2024-04-06	FL	CNT1	C00001	5,160.00	5,160.00
CS00001	2024-04-06	CS	CNT1	CU0002	5,520.00	5,480.00

Day close operates over the bills shown in the register.

Purchases and stock

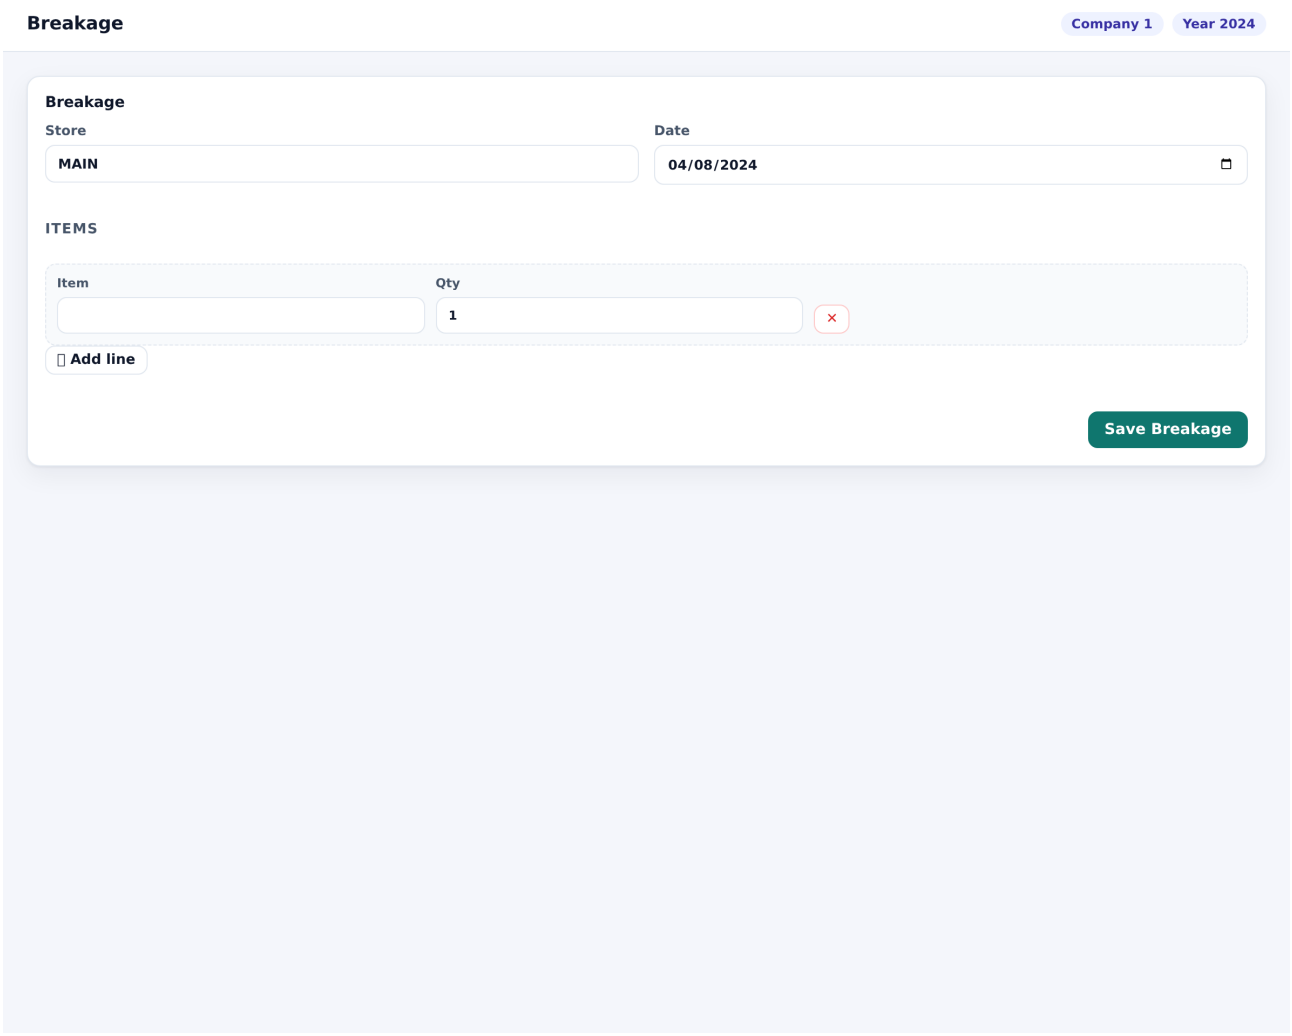

Recording breakage

Who	Admin and User
Where	Transactions - Breakage
What for	Write off damaged or broken stock.

1. Open **Transactions - Breakage**.
2. Set the **Store** and **Date**.
3. Add the broken items and quantities.
4. Select **Save Breakage**. Stock is reduced and the breakage expense is posted.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_breakageentry / breakagemain	Breakage

Breakage entry.

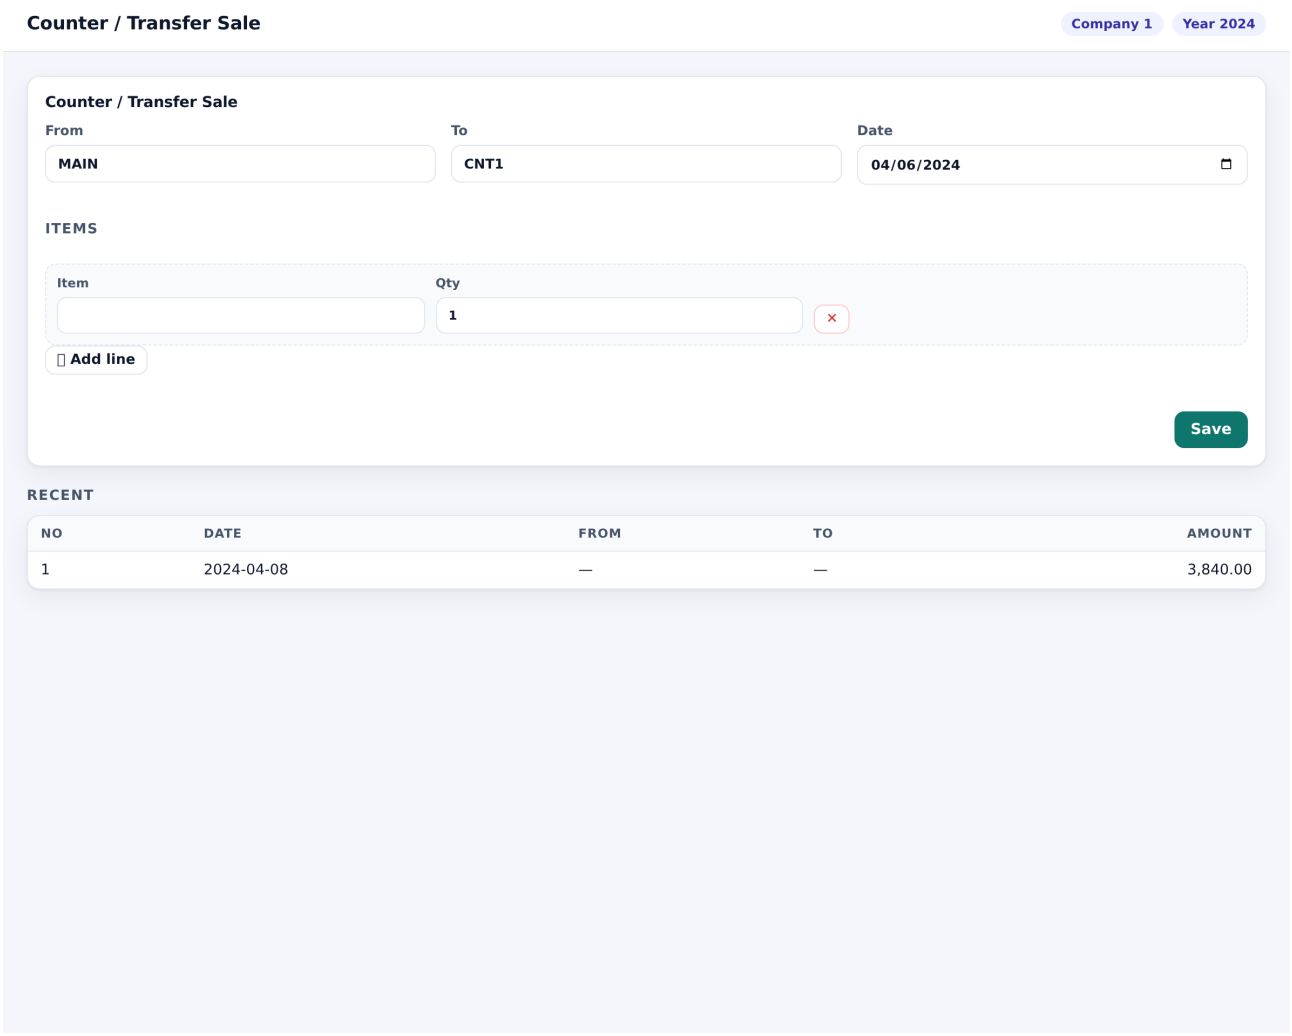

Counter / transfer sale

Who	Admin and User
Where	Transactions - Counter / Transfer Sale
What for	Move goods from the main store to a counter as a sale-style transfer.

1. Open **Transactions - Counter / Transfer Sale**.
2. Set **From**, **To** and the **Date**.
3. Add items and quantities.
4. Select **Save**. The transfer appears in the **Recent** list.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_countersalesTransfer / frm_TransferSale	Counter / Transfer Sale

Counter / transfer sale.

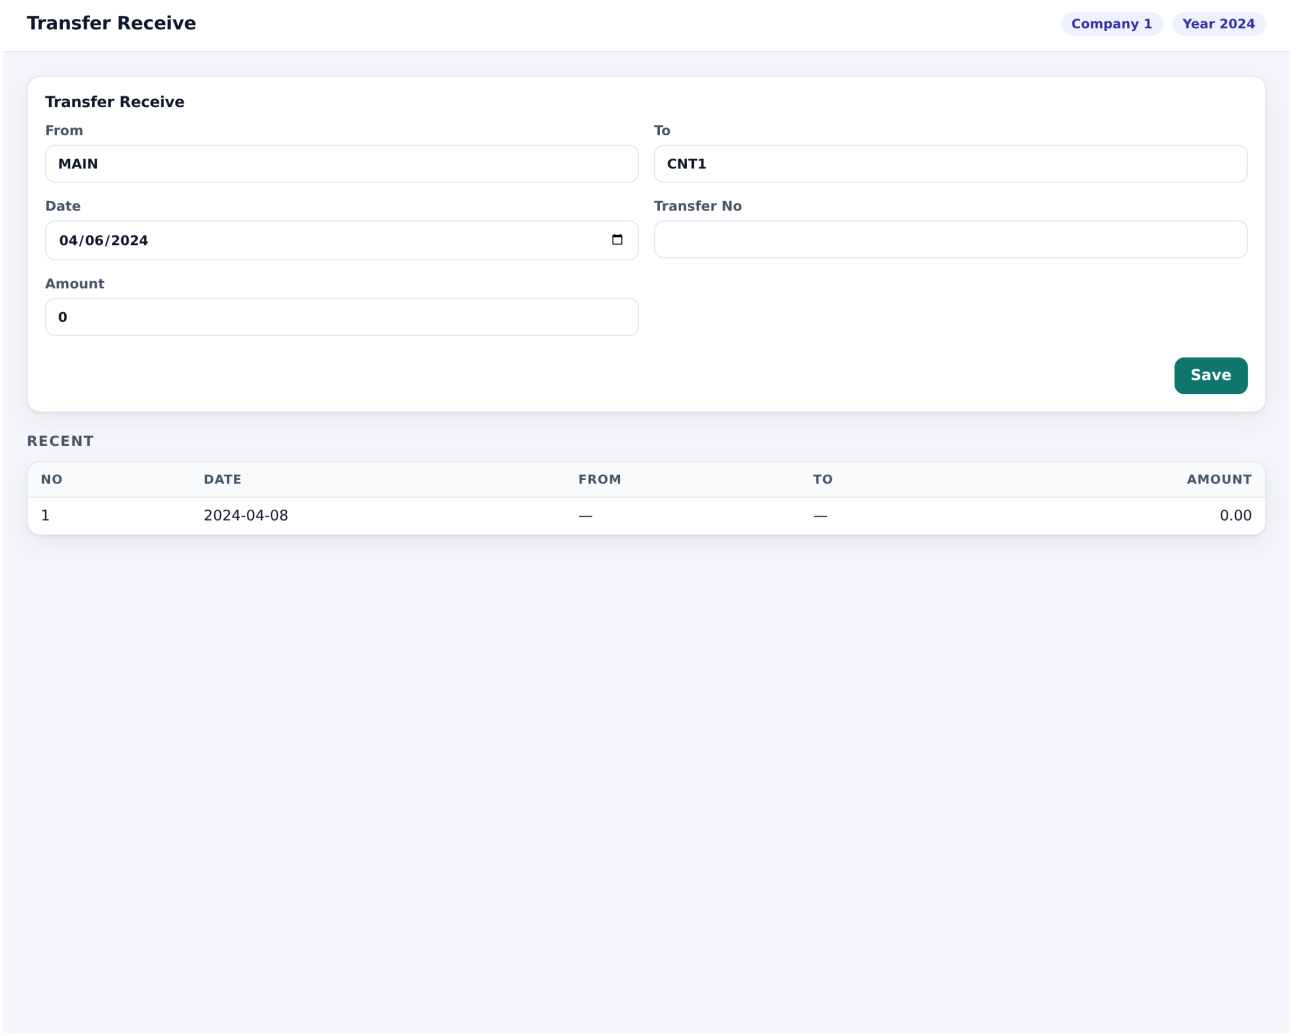

Transfer receive

Who	Admin and User
Where	Transactions - Transfer Receive
What for	Acknowledge stock received at a counter from a transfer.

1. Open **Transactions - Transfer Receive**.
2. Set **From**, **To**, the **Date**, the **Transfer No** and the **Amount**.
3. Save. The receipt appears in the **Recent** list.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_TransferReceive	Transfer Receive

Transfer receive.

Accounts and vouchers

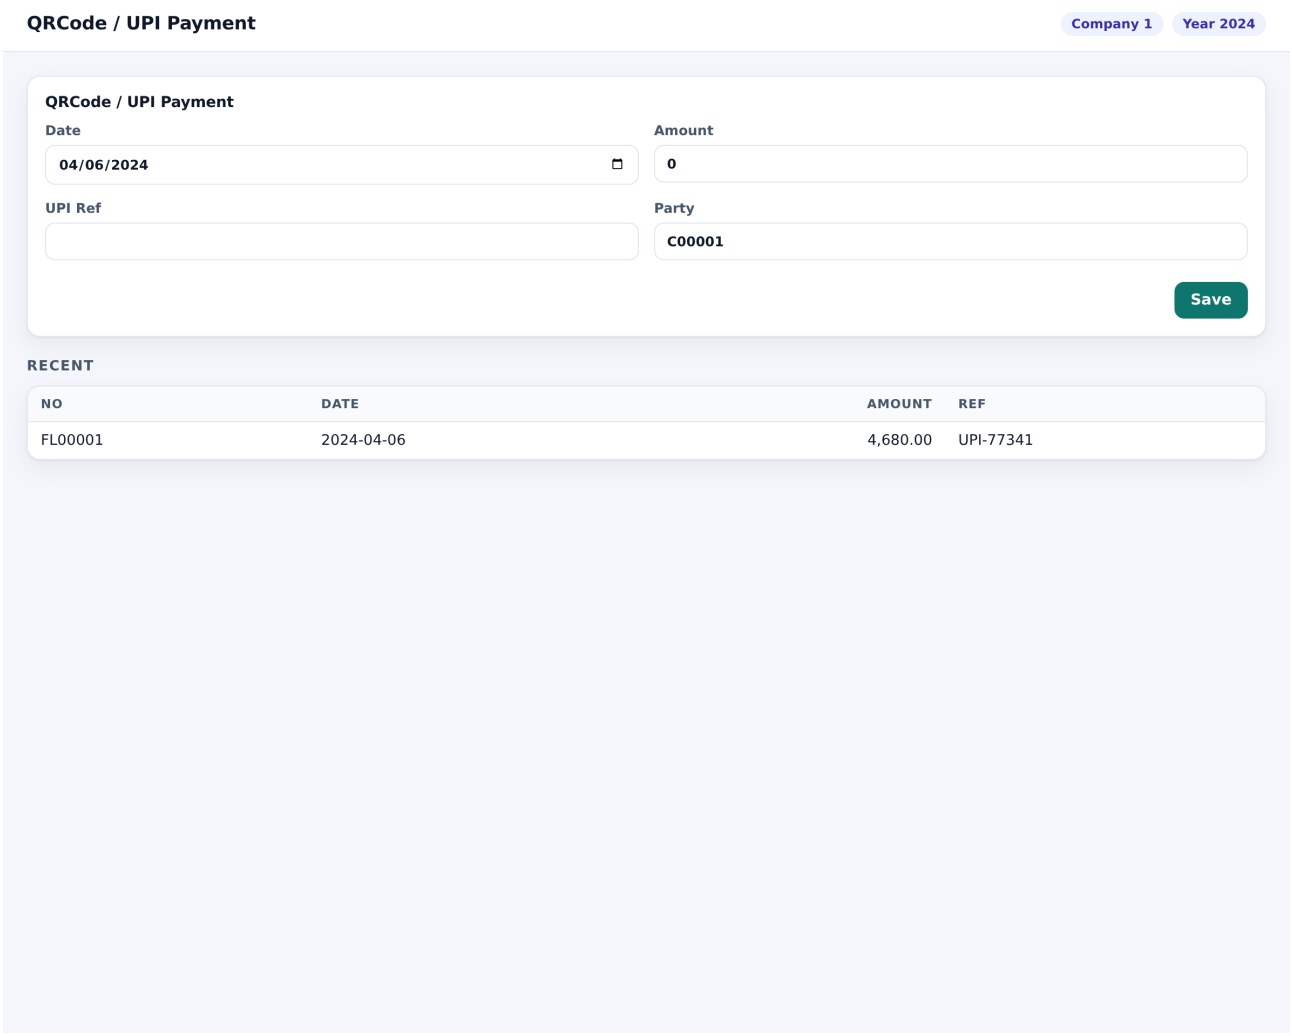

QRCode / UPI payment

Who	Admin and User
Where	Transactions - QRCode / UPI Payment
What for	Record a payment taken by QR code or UPI.

1. Open **Transactions - QRCode / UPI Payment**.
2. Set the **Date**, the **Amount**, the **UPI Ref** and the **Party**.
3. Save. The payment appears under **Recent**.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_qrorder / tbl_UPIRespose	QRCode / UPI Payment

QRCode / UPI payment status.

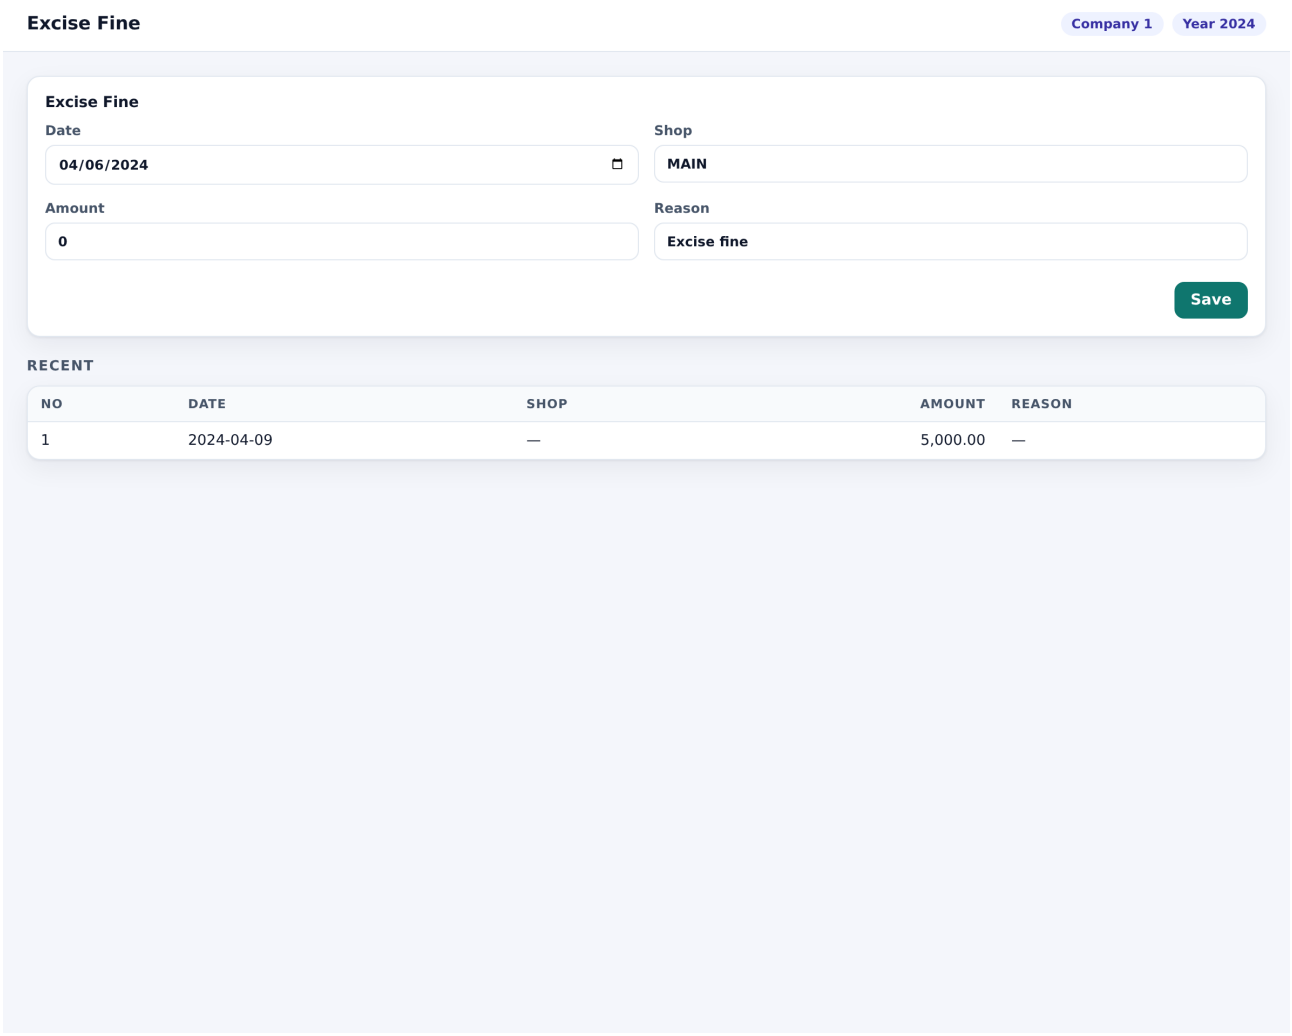

Excise fine

Who	Admin and User
Where	Transactions - Excise Fine
What for	Record an excise fine or penalty against a shop.

1. Open **Transactions - Excise Fine**.
2. Set the **Date**, the **Shop**, the **Amount** and the **Reason**.
3. Save. The fine is listed under **Recent**.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_fine / fine_details	Excise Fine

Excise fine entry.

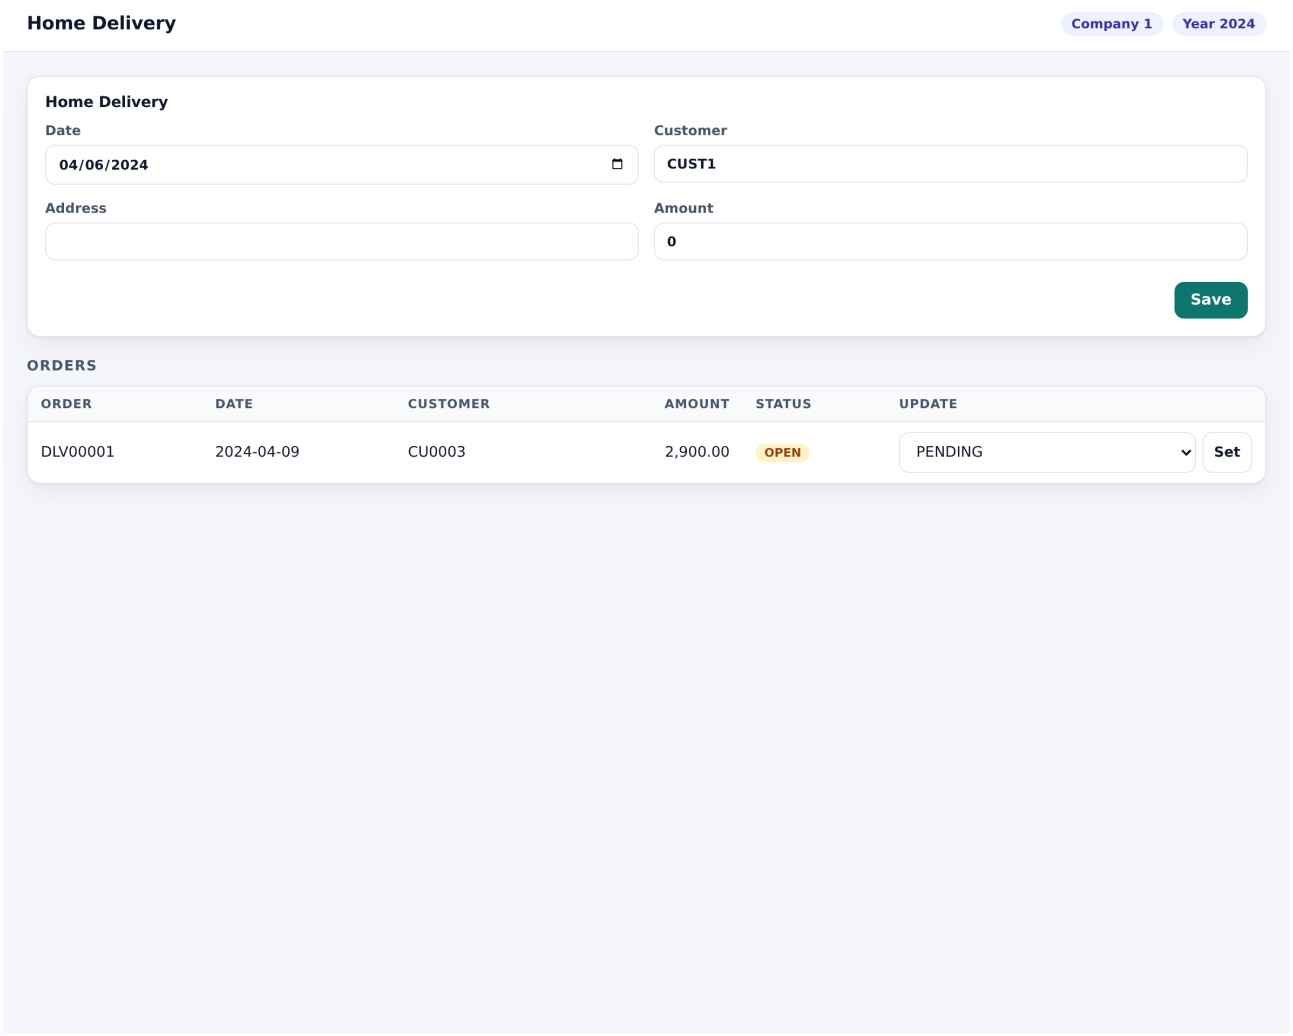

Home delivery orders

Who	Admin and User
Where	Transactions - Home Delivery
What for	Create a delivery order and track it to delivery.

1. Open **Transactions - Home Delivery**.
2. Set the **Date**, the **Customer**, the **Address** and the **Amount**.
3. Save. The order appears in the **Orders** table with a status.
4. To progress an order, pick a new status (PENDING, OUT, DELIVERED, CANCELLED) in the row and select **Set**.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
delivery_orders	Home Delivery

Home delivery orders.

Part C - Masters

Product and party masters

Adding an item (Item Master)

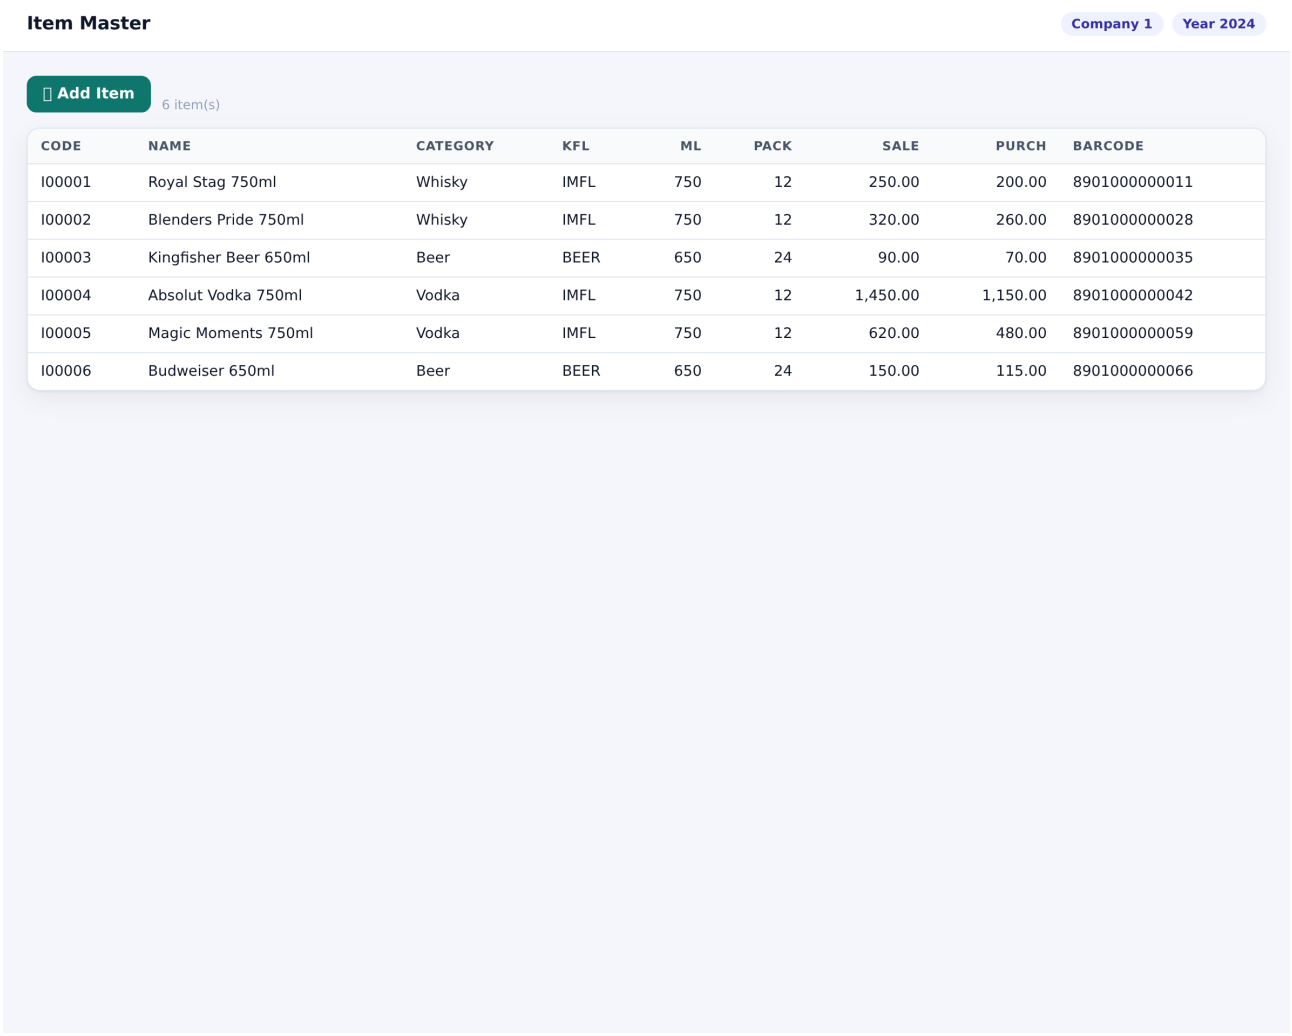

Who	Admin and User
Where	Masters - Item Master
What for	Create the liquor and non-alcoholic products that billing uses.

1. Open **Masters - Item Master**.
2. Select **+ Add Item**.
3. Fill in the item code and name and the packing details (group, category, KFL, strength, ML, packing, barcode).
4. Enter the sale and purchase rates.
5. Save. The item appears in the list with category, ML, pack, sale and purchase rates.

> **Notes**
> Sample items: `I00001` Royal Stag 750ml, `I00002` Blenders Pride 750ml, `I00003` Kingfisher Beer 650ml. Items are used by Sale - POS, Purchase, stock flows and the reports.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_itemmstadd / itemmst	Item Master

Item Master with the demo catalogue.

Maintaining other masters (generic add / edit / delete)

Who	Admin and User
Where	Masters - all master screens
What for	Every master screen works the same way: a table with Add, Edit and Del.

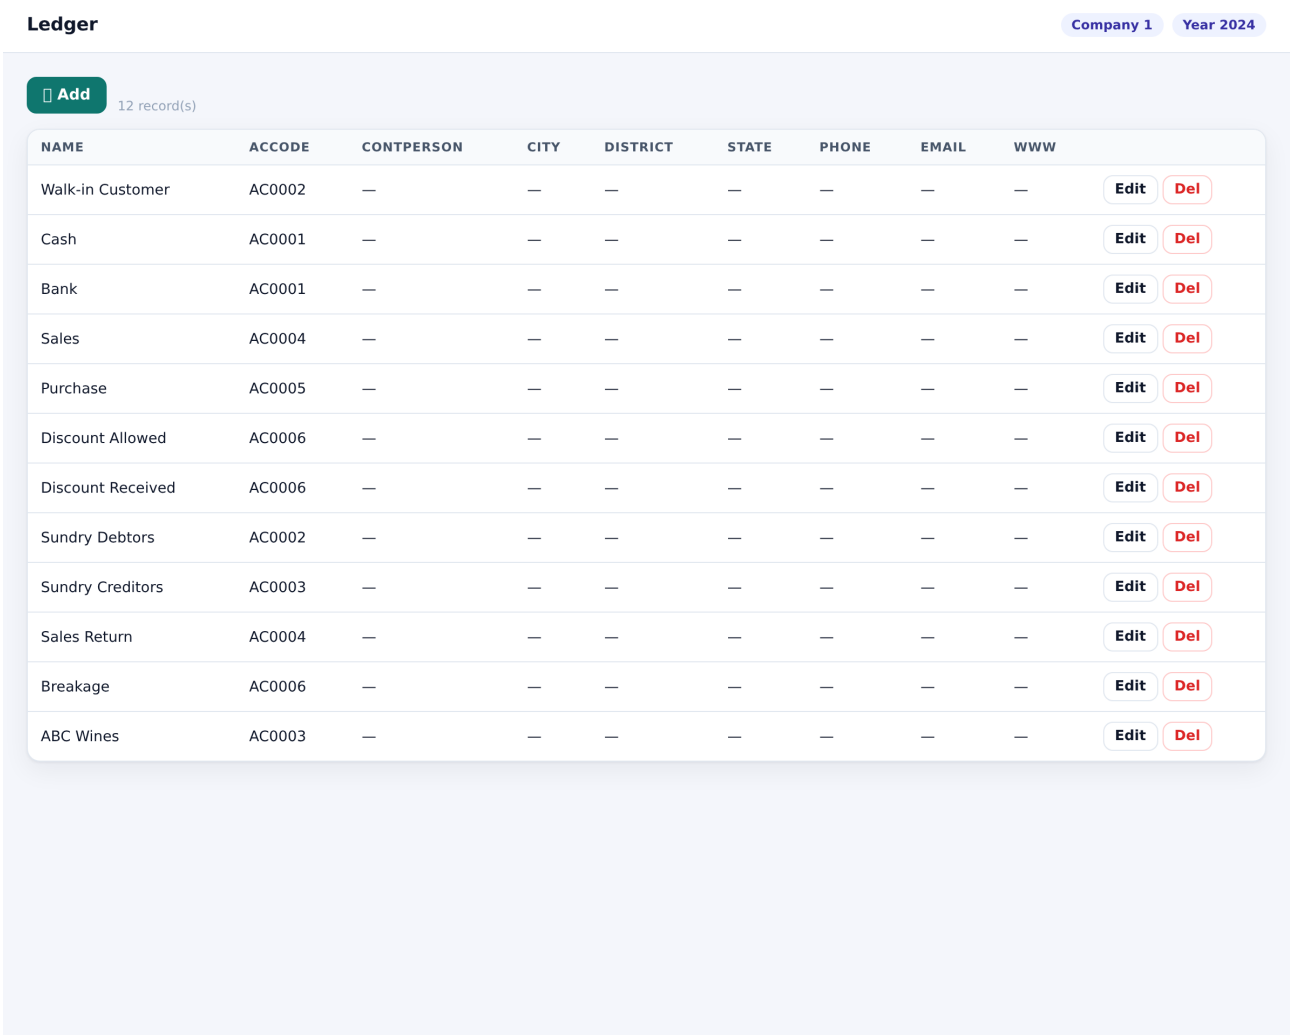

1. Open any master, for example **Masters - Ledger**, **Category**, **KFL**, **Manufacturer**, **Strength**, **Measure and Packing**, **Sales Rate**, **Store Master**, **Counter Master**, **Customer Master**, **Area**, **Tax Schemes**, **Excise Item**, **Excise Report Tagging**, or an **NAI** master.
2. Select **+ Add** to create a record and fill the form.
3. Select **Edit** on a row to change it, or **Del** to remove it.

> **Notes**
> Masters must be set up before the transactions that depend on them: ledgers before vouchers, counters and items before billing.

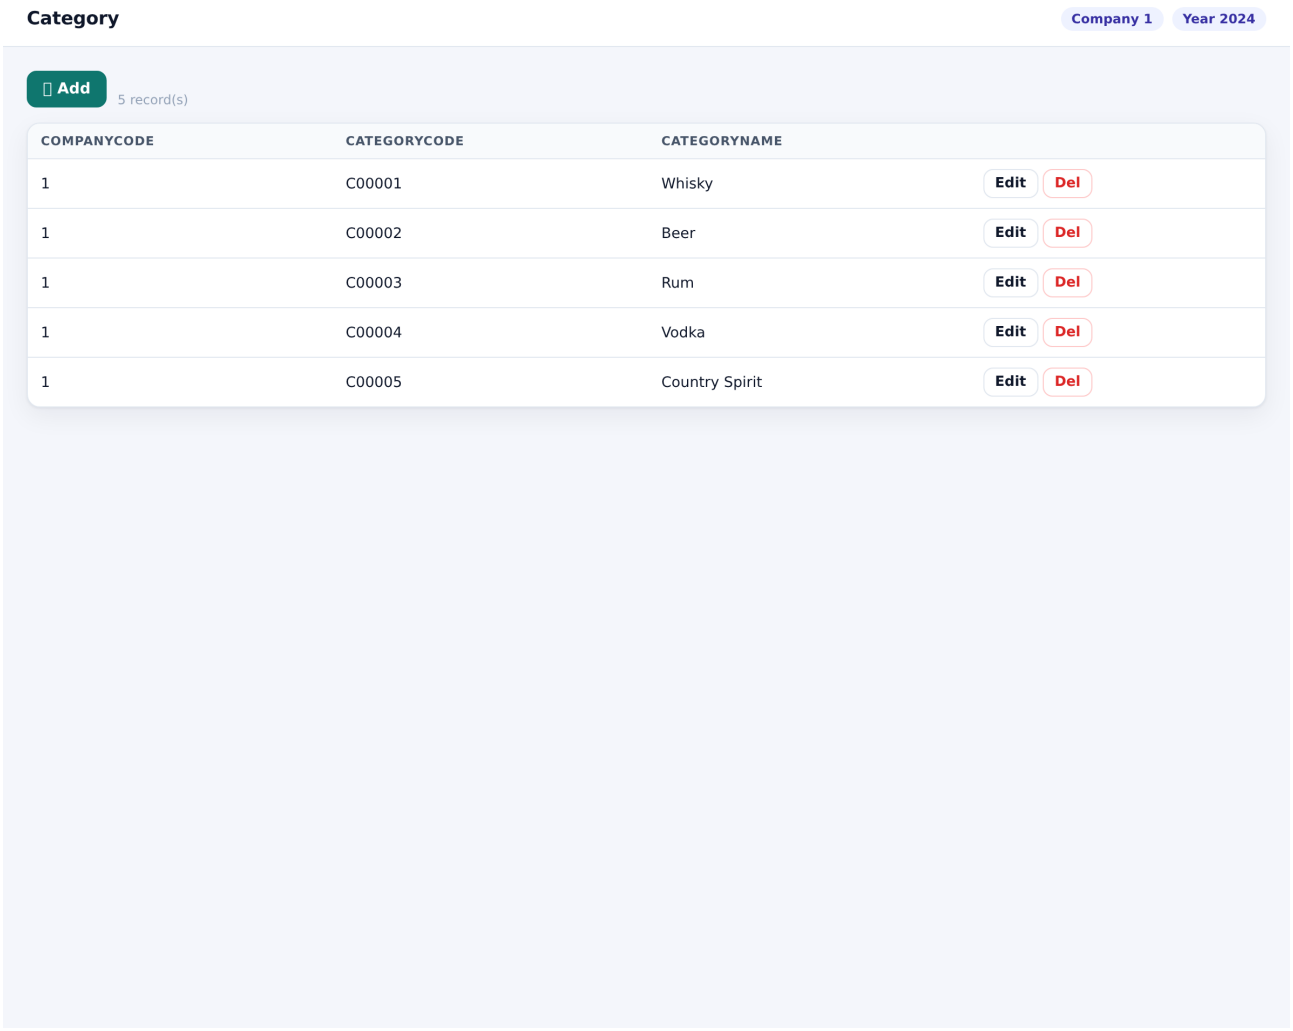

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro

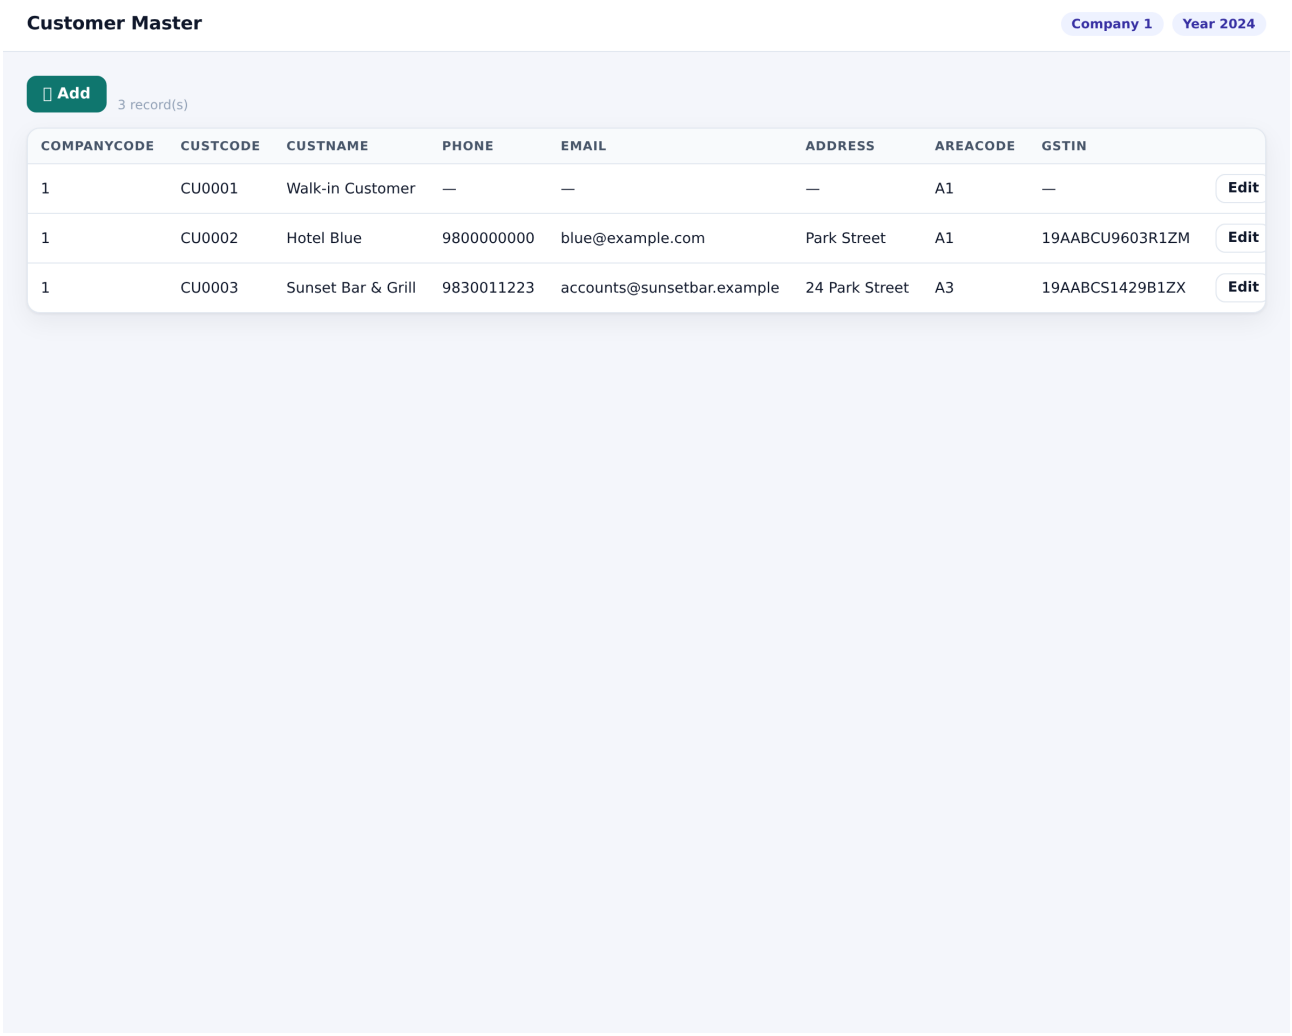

frm_masters / frm_ledger / frm_unit / Frm_ManufacturerMaster	Generic master screens

Ledger master.

Category master.

Customer master.

Schemes and offers

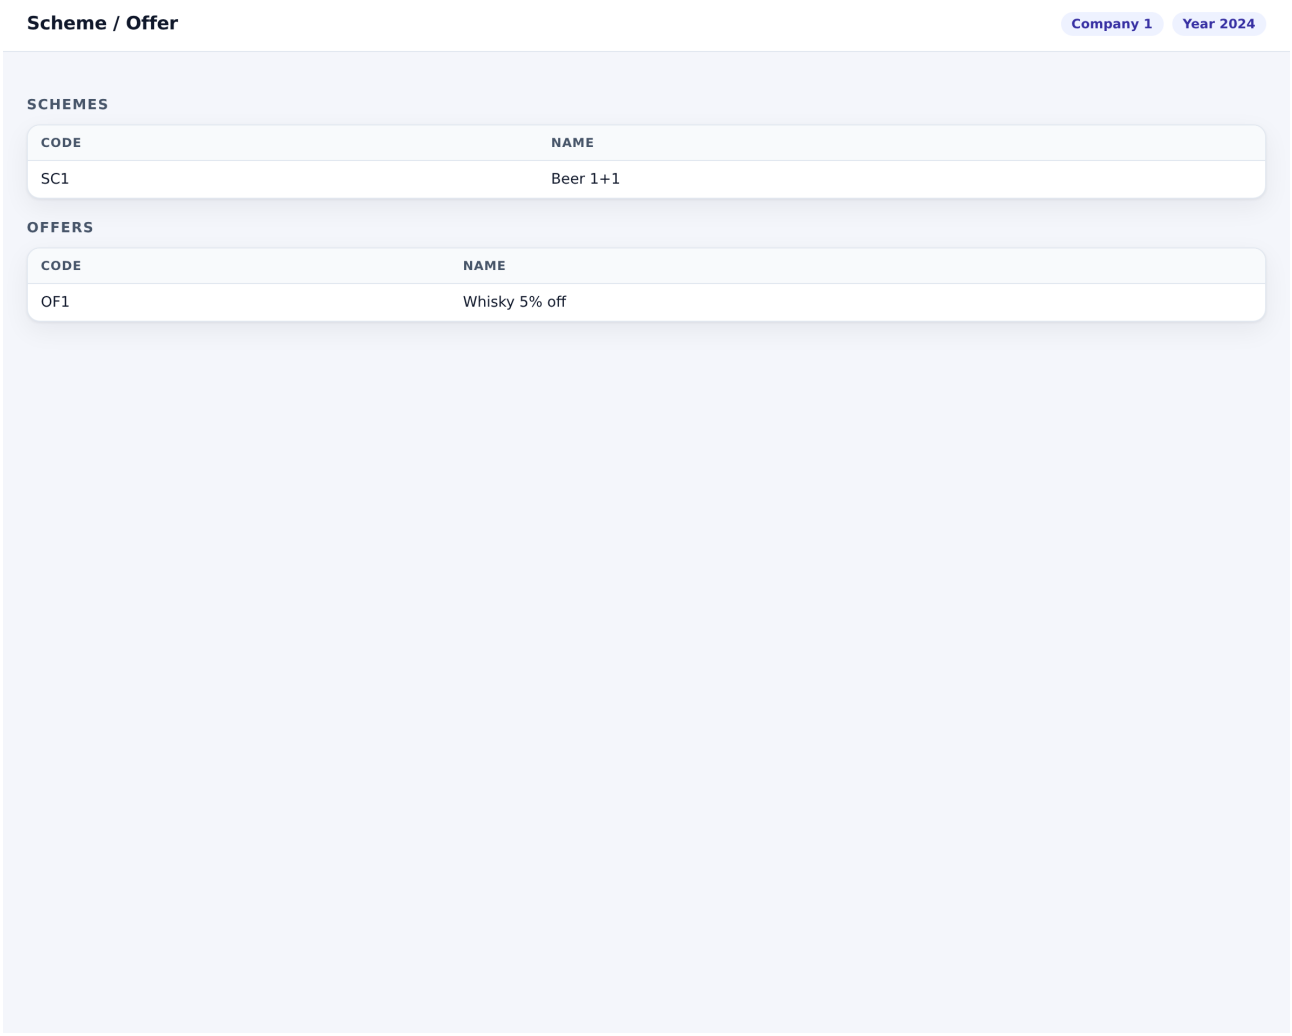

Who	Admin and User
Where	Masters - Scheme / Offer
What for	Set up buy-one-get-one style schemes and percentage offers that POS can apply.

1. Open **Masters - Scheme / Offer**.
2. The screen lists **Schemes** and **Offers**.
3. Maintain them from the master list (add / edit / delete).

> **Notes**
> Sample: scheme SC1 'Beer 1+1' and offer 0F1 'Whisky 5% off'.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_scheme / tbl_scheme, offermst	Schemes and offers

Schemes and offers.

Part E - Tools and utilities

Everyday tools

Calculator

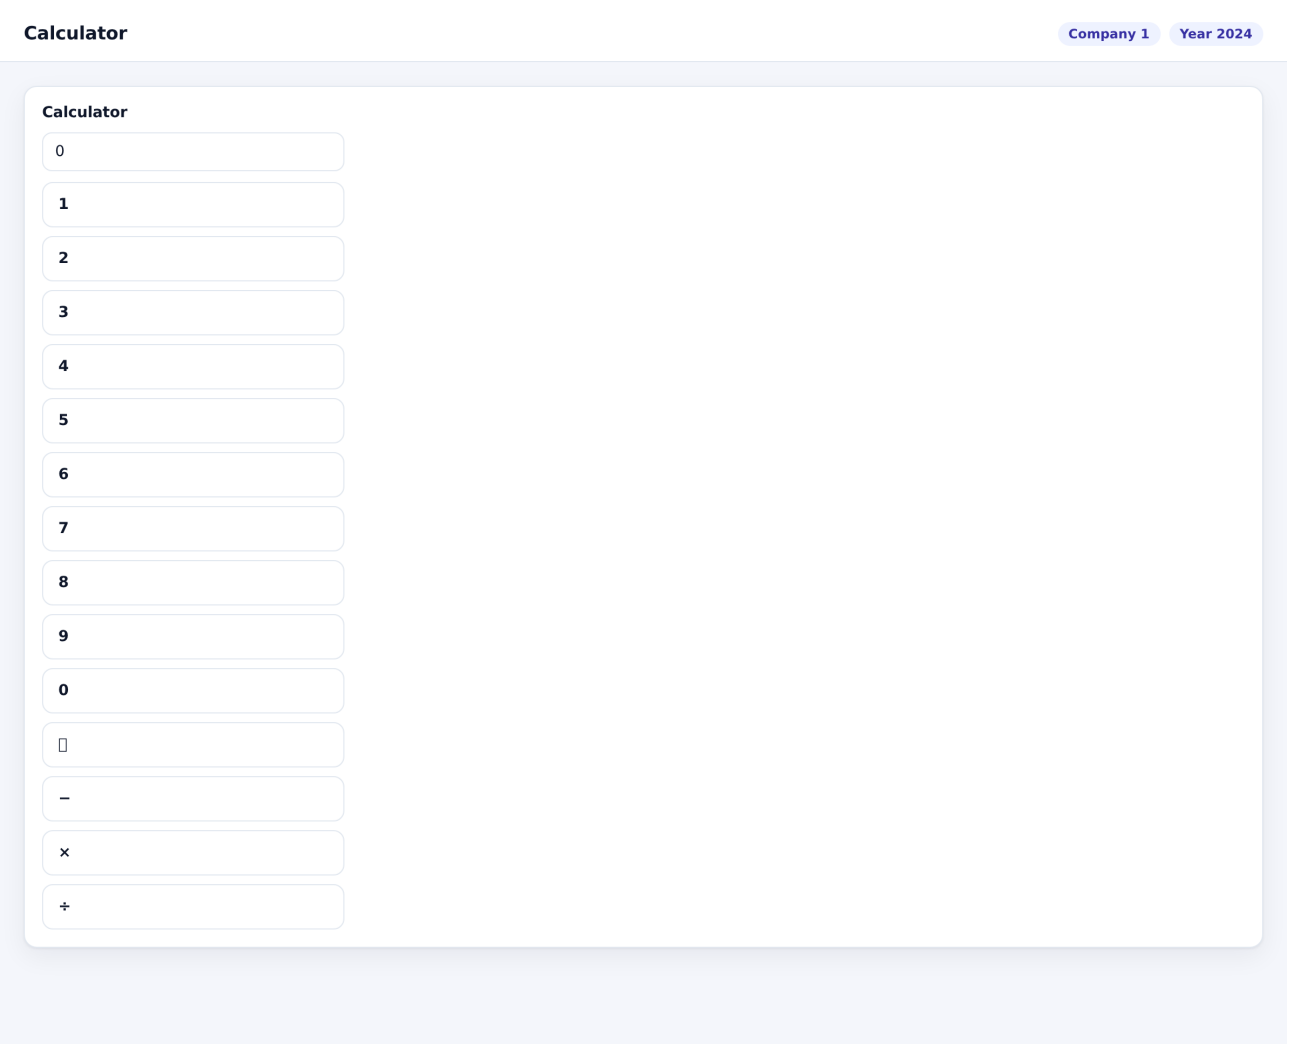

Who	Admin and User
Where	Tools - Calculator
What for	A simple on-screen calculator.

1 Open **Tools - Calculator**.

2 Type digits, then use +, -, x or / to apply an operation.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
tools.calculate	Calculator

Calculator.

SMS / WhatsApp messages

Who	Admin and User
Where	Tools - SMS / WhatsApp
What for	Queue a text or WhatsApp message and review the outbox.

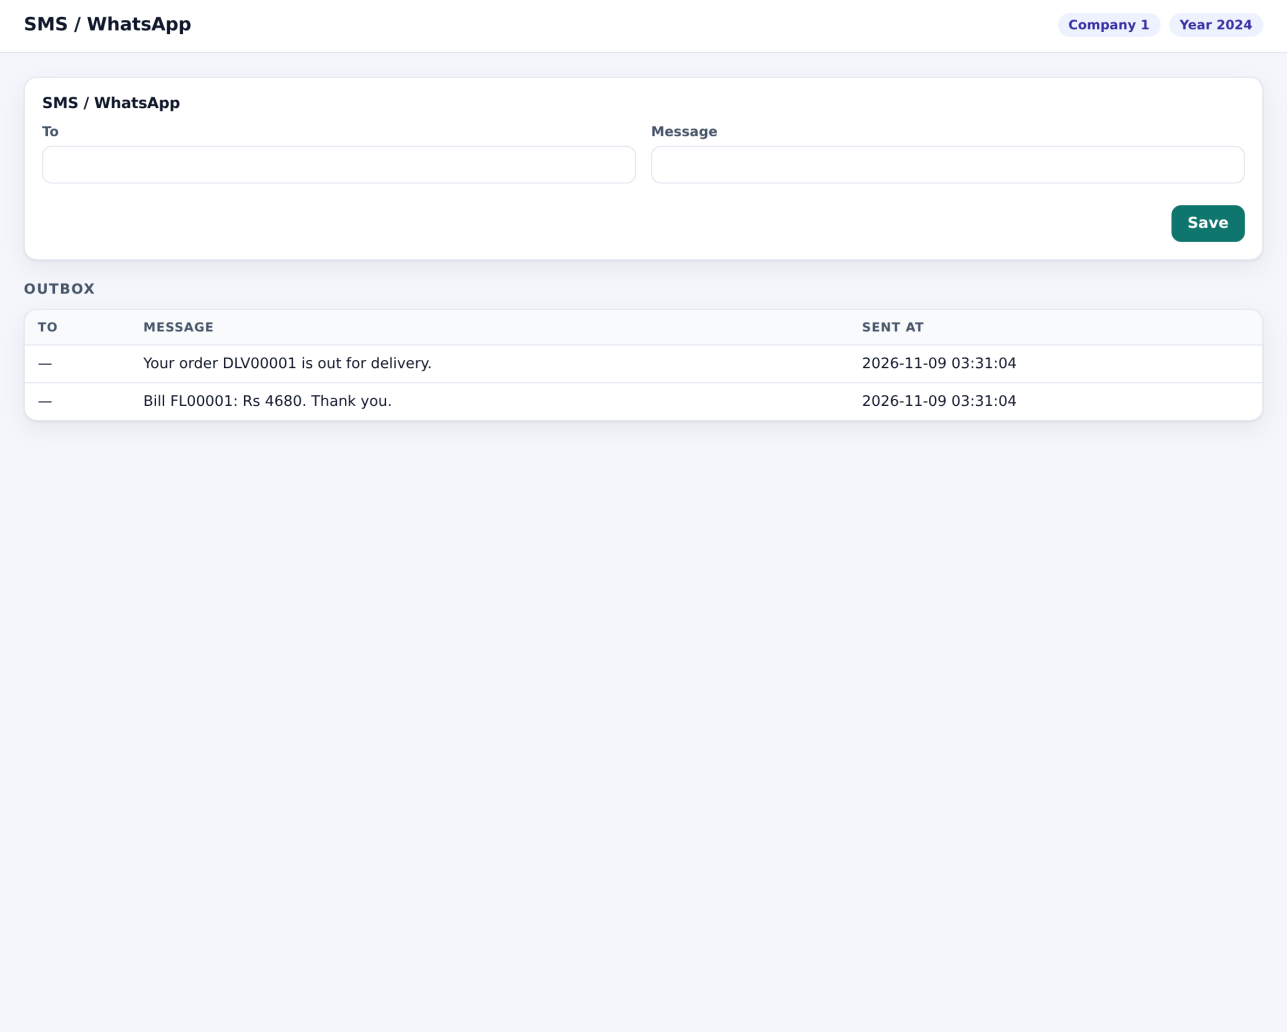

1 Open **Tools - SMS / WhatsApp**.

2 Enter the **To** number and the **Message**.

3 Save. The message is queued and listed in the **Outbox**.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_message / tbl_MessageLog	SMS / WhatsApp

SMS / WhatsApp messages.

PML print and reports

Who	Admin and User
Where	Tools - PML Print and Reports
What for	Record PML (bottles and ML) entries and review them.

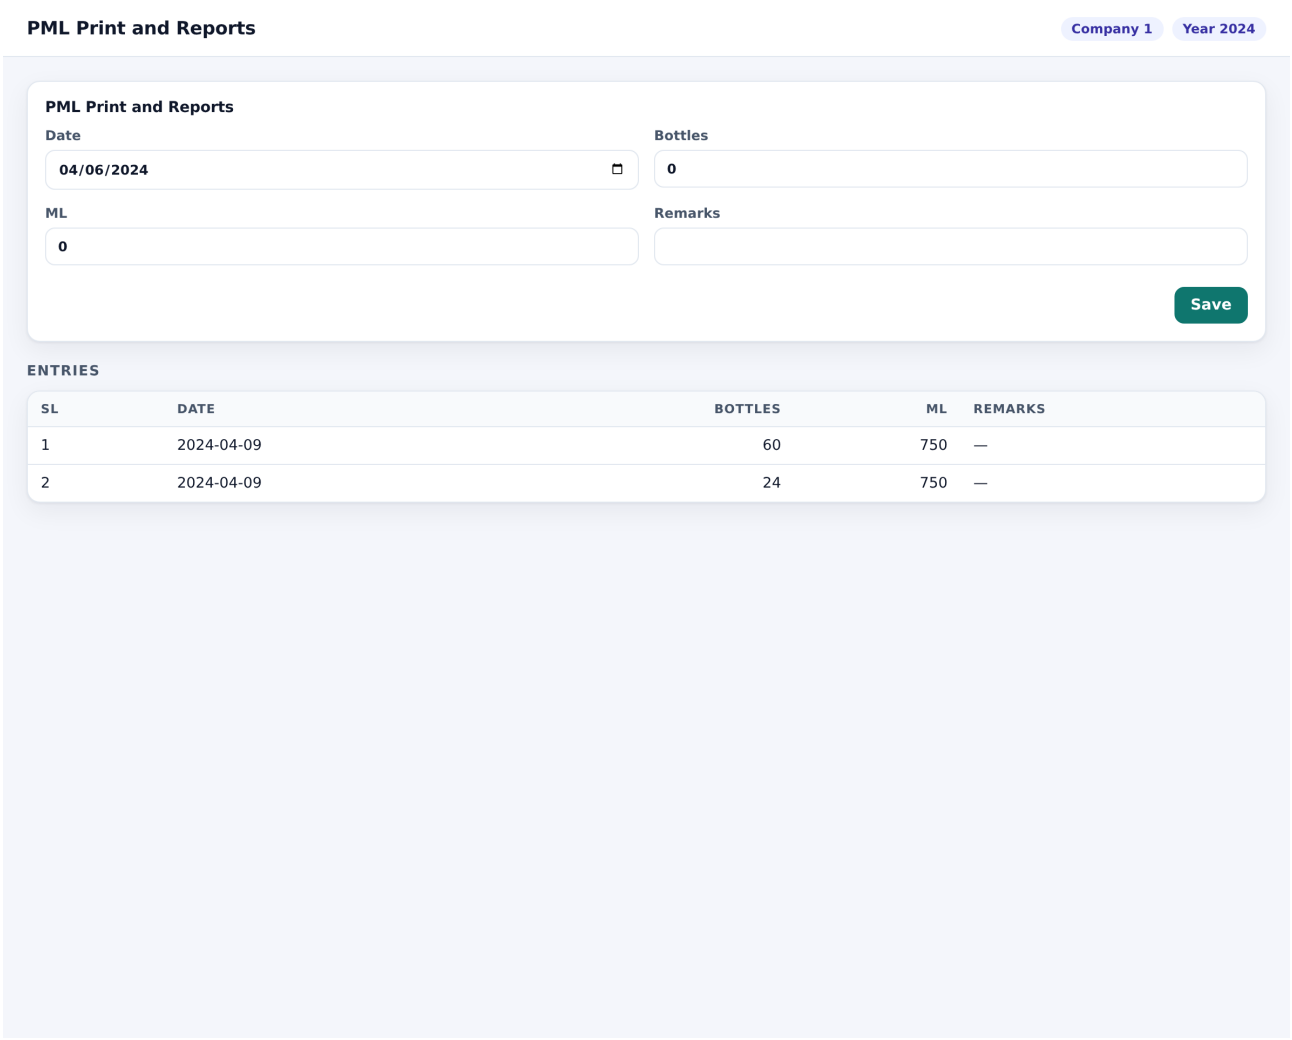

1 Open **Tools - PML Print and Reports**.

2 Enter the **Date**, **Bottles**, **ML** and **Remarks**.

3 Save. The entry appears in the **Entries** table.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
tbl_PML / tbl_PMLCAL	PML Print and Reports

PML print and reports.

Part F - Integrations and compliance

State excise

State excise compliance sync

Who	Admin (setup) and User (billing)
Where	Tools - Excise Sync
What for	Queue every sale line for the state excise portal by its excise identity, upload when online, push the daily closing balance, and apply indents / transport permits received from the portal. Billing never depends on the network.

1. Open **Tools - Excise Sync**.
2. In **State settings**, pick the **State** (for example West Bengal, which uses the direct EODB API, or Odisha, which uses the portal agent), then enter the **Licensee ID**, **Endpoint base** and **Credential**, and save.
3. The status cards show the queue: **Pending**, **Sent to portal**, **Uploaded**, **Failed**, plus **Unmatched** and **Total**.
4. Bills are captured automatically as you post them; to backfill, select **Capture pending bills**.
5. Select **Upload to portal** (API states) or **Stage for portal agent** (portal states such as Odisha).
6. Fix any **Unmatched** lines (GTIN + pack size + MRP no longer match the item master) - they are skipped on upload until corrected.
7. For the closing balance: pick the **Date**, select **Build closing balance**, then **Upload closing balance**.
8. For portal states, export the batch with **Export batch (JSON)** and confirm with **Confirm all sent as uploaded** once the portal shows the lines accepted.
9. Review **Portal documents received** (indents / transport permits) and select **Apply** to post a document into purchase.
10. Check the **Sync log** for what was sent and received.

> **Notes**
> Offline-first: every sale and return line is queued locally by excise identity at billing, so printing and billing never wait for the network.
> The pre-validation gate compares GTIN + pack size + MRP against the item master before upload; mismatches are held back as unmatched.
> West Bengal uses the `api` adapter (token auth + push); Odisha uses the `portal` adapter (stage a batch + agent confirm).

Part G - Reference

Default accounts and sample data

Who	Reference
Where	Seeded data
What for	Codes you can use to explore every flow.

1. Sign in as `A00001` / `admin` (administrator) or `A00002` / `cashier` (user). If the admin PIN has been changed, use the current PIN or reset it - see **Forgot the admin PIN**.
2. Items: `I00001` Royal Stag 750ml, `I00002` Blenders Pride 750ml, `I00003` Kingfisher Beer 650ml, `I00004` Absolut Vodka 750ml, `I00005` Magic Moments 750ml, `I00006` Budweiser 650ml.
3. Ledgers: cash `L00001`, bank `L00002`, sales `L00003`, purchase `L00004`; supplier `S00001`; walk-in customer `C00001`.
4. Stores: `MAIN` (main store), `CNT1` (counter 1) and `BAR1` (main bar).
5. Year: 2024-2025. Company 1.

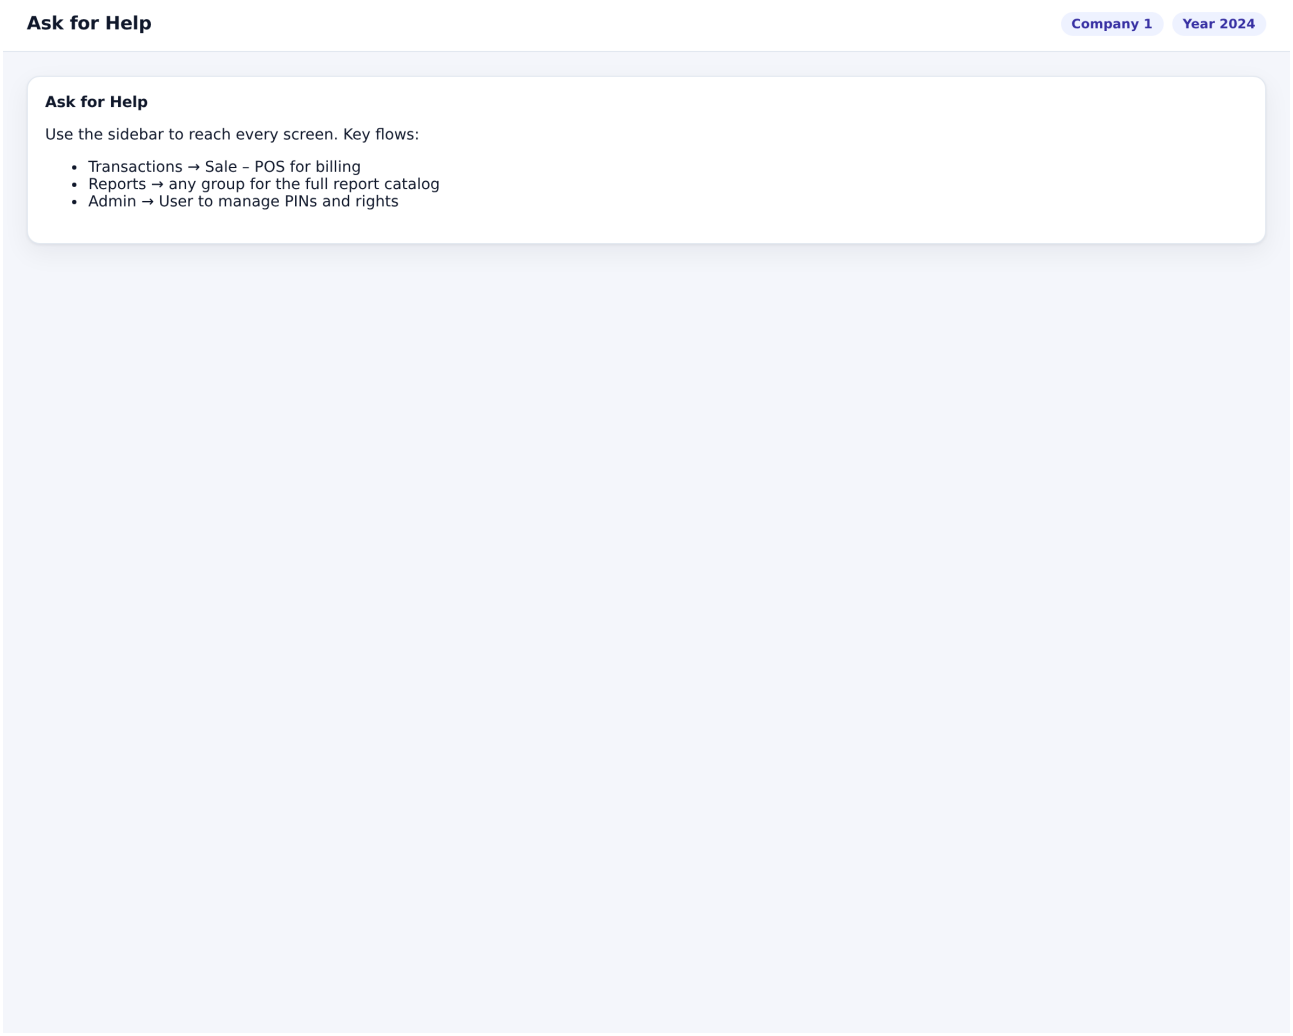

Getting help

Who	Admin and User
Where	Help menu
What for	Where to look for help inside the app.

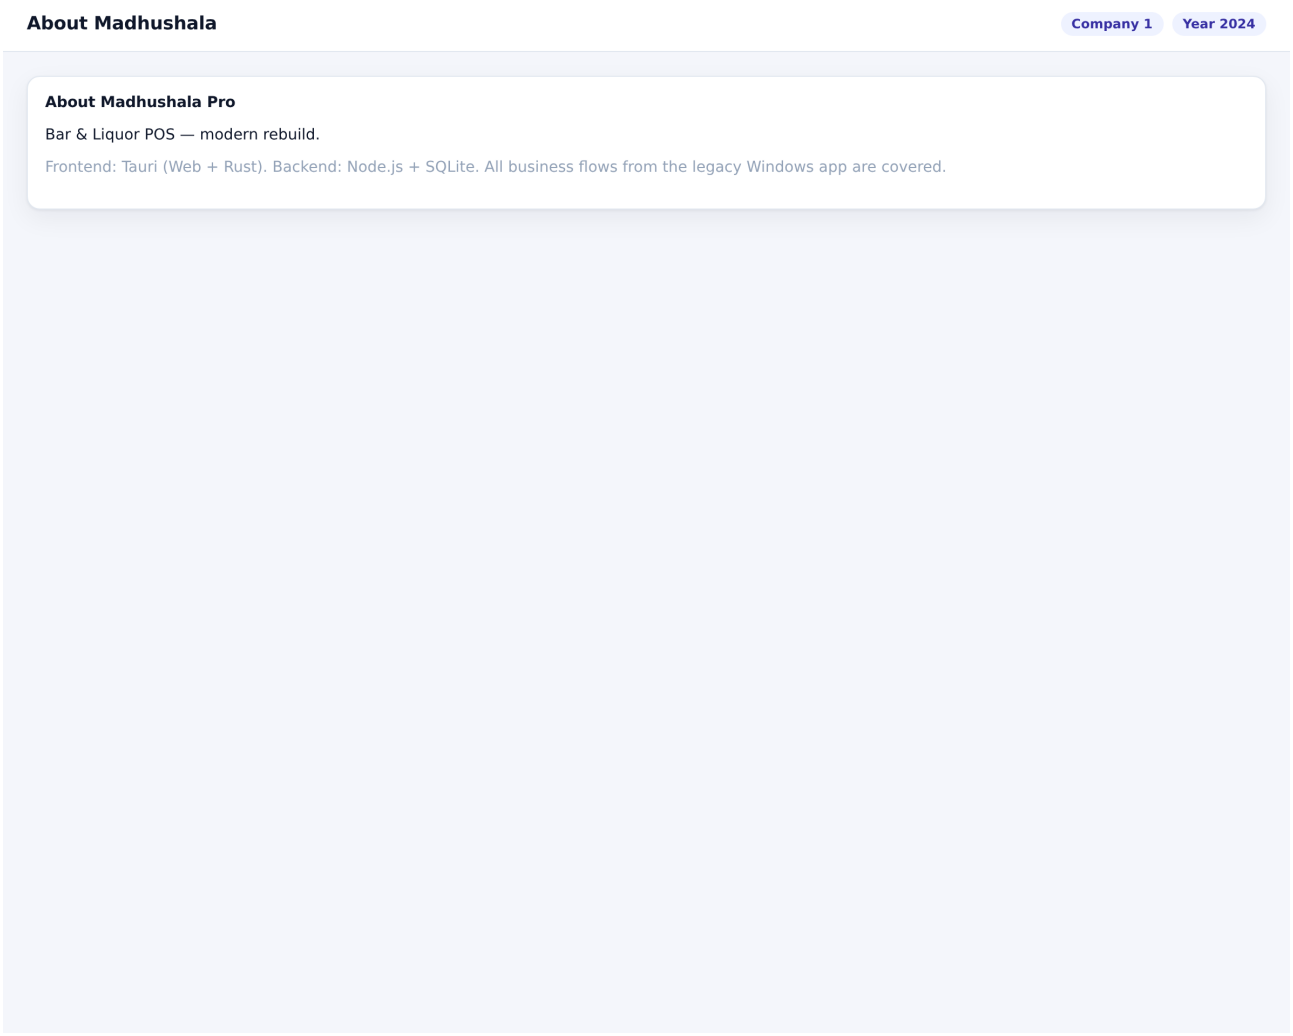

1. Open **Help - Ask for Help** for the key flow pointers.
2. Open **Help - About Madhushala** for the product and stack summary.
3. Open **Help - List of Updates** for the recent change list.

Where this lives: legacy form / table → rebuilt screen

Legacy (WinForms / SQL Server)	Rebuilt in Madhushala Pro
frm_ask4help / frm_AboutBox1	Help menu

Help - Ask for Help.

Help - About Madhushala Pro.
